**The Diversity of Life** Edward O. Wilson, 1992 View a collection of videos on Professor Wilson entitled On the Relation of Science and the Humanities In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of violence nature visits upon its creatures Edward O Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain forests are cut down he poignantly describes the death throes of the living world s diversity projected to decline as much as 20 percent by the year 2020 All evidence marshaled here resonates through Wilson s tightly reasoned call for a spirit of stewardship over the world s biological wealth He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth Cutting through the tangle of environmental issues that often obscure the real concern Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over he convincingly drives home the point that both aims can and must be integrated Unparalleled in its range and depth Wilson s masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet s health

**The Diversity of Life** Edward O. Wilson, 1993 Harvard Professor and two time Pulitzer Prize winner Edward Wilson takes readers through time tracing the processes that create new species the five cataclysmic events that have disrupted evolution over the past 600 million years and how humans are destroying diversity at a projected rate of 20 percent over the next 30 years

*Evolution and the Diversity of Life* Ernst Mayr, 1997 The diversity of living forms and the unity of evolutionary processes are themes that have permeated the research and writing of Ernst Mayr a Grand Master of evolutionary biology The essays collected here are among his most valuable and durable contributions that form the basis for much of the contemporary

*The Diversity of Life* Ray Arters, The diversity of life on Earth represents one of the most awe inspiring and scientifically fascinating phenomena in the universe encompassing an estimated 8.7 million species of organisms that inhabit virtually every conceivable environment on our planet This extraordinary biological richness extends from the deepest ocean trenches to the highest mountain peaks from scalding hot springs to frozen polar regions and from the vast expanses of tropical rainforests to the seemingly barren landscapes of deserts and tundra Each of these environments harbors unique assemblages of organisms that have evolved remarkable adaptations enabling them to thrive under specific environmental conditions creating a complex tapestry of life that has been shaped by billions of years of evolutionary innovation and environmental change Understanding the full scope of biological diversity requires examining life at multiple levels of organization from the genetic variation present within individual populations to the spectacular array of different species that populate ecosystems worldwide Genetic diversity represents the foundation upon which all other forms of biological diversity rest providing the raw material for evolutionary change and adaptation This genetic variation manifests as differences in DNA sequences among individuals within species creating the potential for populations to respond to environmental challenges through natural selection and evolutionary adaptation Species diversity encompasses the remarkable variety of different life forms that have evolved on Earth each representing a unique solution to the challenges of survival and reproduction in particular environmental contexts The concept of species itself proves more complex than initially apparent

with biologists recognizing that species boundaries can be fluid and that different species concepts may be appropriate for different groups of organisms The biological species concept defines species as groups of interbreeding populations that are reproductively isolated from other such groups while morphological and ecological species concepts focus on structural similarities and ecological roles respectively     **The Biodiversity Mission in American Environmentalism** John Attix Kinch,1996     *The Philosophy of Teaching* Arnold Tompkins,1894     **The Diversity of Life** C.
