The Yimas Language Of New Guinea:

The Yimas Language of New Guinea William A. Foley, 1991 A study of the Yimas language its grammar and lexicon the social and cultural contexts of the use of the language its history and genetic relations and its interactions with neighbouring languages Pref [Applicative Constructions in the World's Languages](#) Fernando Zuniga, Denis Creissels, 2024-01-29 This book presents a state of the art cross linguistic survey of applicative constructions in the functional typological tradition An introductory section sets the terminological and analytical stage presents the methodology used by the different chapters and provides a typological outlook The individual contributions address the morphological syntactic and semantic variation of applicatives as well as their discourse pragmatic function They cover all major language families and some isolates that feature some illuminating version of the phenomenon paying special attention to language internal variation and unity The phenomena surveyed range from those instances usually considered canonical valency increasing syntactically and semantically predictable productive dedicated and optional to those occasionally understudied in descriptive works and frequently neglected in comparative studies valency neutral rather unpredictable lexicalized syncretic and or obligatory

[Number in the World's Languages](#) Paolo Acquaviva, Michael Daniel, 2022-06-21 The strong development in research on grammatical number in recent years has created a need for a unified perspective The different frameworks the ramifications of the theoretical questions and the diversity of phenomena across typological systems make this a significant challenge This book addresses the challenge with a series of in depth analyses of number across a typologically diverse sample unified by a common set of descriptive and analytic questions from a semantic morphological syntactic and discourse perspective Each case study is devoted to a single language or in a few cases to a language group They are written by specialists who can rely on first hand data or on material of difficult access and can place the phenomena in the context of the respective system The studies are preceded and concluded by critical overviews which frame the discussion and identify the main results and open questions With specialist chapters breaking new ground this book will help number specialists relate their results to other theoretical and empirical domains and it will provide a reliable guide to all linguists and other researchers interested in number *Atlantic Meets Pacific* Francis Byrne, John A. Applicative Constructions David A. Peterson,2007 This book presents the first systematic typological analysis of applicatives across African American Indian and East Asian languages It is also the first to address their functions in discourse the derivation of their semantic and syntactic properties and how and why they have changed over time Applicative constructions are typically described as transitivizing because they allow an intransitive base verb to have a direct object The term originates from the seventeenth century missionary grammars of Uto Aztecan languages Constructions designated as prepositional benefactive and instrumental may refer to the same or similar phenomena Applicative constructions have been deployed in the development of a range of syntactic theories which have then often been used to explain their functions usually within the context of Bantu languages Dr Peterson provides a wealth of cross linguistic information on discourse functional diachronic and typological aspects of applicative constructions He documents their unexpected synchronic variety and the diversity of diachronic sources about them He argues that many standard assumptions about applicatives are unfounded and provides a clear guide for future language specific and cross linguistic research and analysis

Classifiers Aleksandra I[r]evna Aikhenval'd,2000 Almost all languages have some grammatical means for the linguistic categorization of nouns Well known systems such as the lexical numeral classifiers of South East Asia on the one hand and the highly grammaticalized gender agreement classes of Indo European languages on the other are the

extremes of a continuum They can have a similar semantic basis and one can develop from the other Classifiers come in different morphological forms they can be free nouns clitics or affixes Some languages combine several varieties of classifiers Different types of classifiers show varying correlations with other grammatical categories In addition they differ in their semantics in the way they develop and in the way they become obsolescent and disappear These parameters are the basis for the typology of classifiers presented here This book is almost certainly the most substantial cross linguistic account of classifiers ever published Its range of exemplification includes major and minor languages from every continent several from the author's own fieldwork The work combines original research with innovative analysis and will interest typologists those working in the field of morphosyntactic variation and lexical semantics and exponents of formal theories who wish to explain the range of linguistic diversity found in natural language

Semantics Paul Bennett, 2002 This is an intermediate level textbook on semantics It assumes some prior acquaintance with linguistics i e a basic knowledge of grammatical terminology and previous introductory study of syntax and semantics but does not presuppose any particular theoretical orientation or any prior knowledge of the topics it covers It is aimed at intermediate and advanced undergraduates and beginning postgraduates in general linguistics as well as those interested in the grammar of particular languages It will also be relevant to students of computational linguistics and artificial intelligence An introductory chapter deals with useful background notions such as grammaticalization and prototype theory The remaining chapters each cover a single topic links between syntactic and semantic categories proposition types deixis tense aspect modality negation and determination The basic approach taken is to examine each phenomenon in English before setting up a more general framework and then looking at a number of other languages including material on French and German and on non standard varieties of English and presenting some but not masses of data from exotic languages Each chapter concludes with copious suggestions for further reading Paul Bennett received his PhD from the School of Oriental and African Studies University of London He is Senior Lecturer in Linguistics at UMIST Manchester Previous publications include Multilingual Aspects of Information Technology co author 1986 Linguistic Theory and Computer Applications co editor 1987 and A Course in Generalized Phrase Structure Grammar 1995 Product Description
