## **The Zeta Functions Of Picard Modular Surfaces:**

The Zeta Functions of Picard Modular Surfaces Université de Montréal. Centre de recherches mathématiques, 1992

Although they are central objects in the theory of diophantine equations the zeta functions of Hasse Weil are not well understood One large class of varieties whose zeta functions are perhaps within reach are those attached to discrete groups generically called Shimura varieties The techniques involved are difficult representation theory and harmonic analysis the trace formula and endoscopy intersection cohomology and L2 cohomology and abelian varieties with complex multiplication The simplest Shimura varieties for which all attendant problems occur are those attached to unitary groups in three variables over imaginary quadratic fields referred to in this volume as Picard modular surfaces The contributors have provided a coherent and thorough account of necessary ideas and techniques many of which are novel and not previously published

**Relatively Complete Models of Picard Modular Surfaces** Andrea Elisabeth Miller, 2002      **Contributions to Automorphic Forms, Geometry, and Number Theory** Haruzo Hida, Dinakar Ramakrishnan, Freydoon Shahidi, 2004-03-11

In Contributions to Automorphic Forms Geometry and Number Theory Haruzo Hida Dinakar Ramakrishnan and Freydoon Shahidi bring together a distinguished group of experts to explore automorphic forms principally via the associated L functions representation theory and geometry Because these themes are at the cutting edge of a central area of modern mathematics and are related to the philosophical base of Wiles proof of Fermat s last theorem this book will be of interest to working mathematicians and students alike Never previously published the contributions to this volume expose the reader to a host of difficult and thought provoking problems Each of the extraordinary and noteworthy mathematicians in this volume makes a unique contribution to a field that is currently seeing explosive growth New and powerful results are being proved radically and continually changing the field s make up Contributions to Automorphic Forms Geometry and Number Theory will likely lead to vital interaction among researchers and also help prepare students and other young mathematicians to enter this exciting area of pure mathematics Contributors Jeffrey Adams Jeffrey D Adler James Arthur Don Blasius Siegfried Boecherer Daniel Bump William Casselmann Laurent Clozel James Cogdell Laurence Corwin Solomon Friedberg Masaaki Furusawa Benedict Gross Thomas Hales Joseph Harris Michael Harris Jeffrey Hoffstein Herv Jacquet Dihua Jiang Nicholas Katz Henry Kim Victor Kreiman Stephen Kudla Philip Kutzko V Lakshmi Bai Robert Langlands Erez Lapid Ilya Piatetski Shapiro Dipendra Prasad Stephen Rallis Dinakar Ramakrishnan Paul Sally Freydoon Shahidi Peter Sarnak Rainer Schulze Pillot Joseph Shalika David Soudry Ramin Takloo Bigash Yuri Tschinkel Emmanuel Ullmo Marie France Vigneras Jean-Loup Waldspurger

**Motives** Uwe Jannsen, Jean-pierre Serre, Steven Kleiman, 1994-02-28 Motives were introduced in the mid 1960s by Grothendieck to explain the analogies among the various cohomology theories for algebraic varieties to play the role of the missing rational cohomology and to provide a blueprint for proving Weil s conjectures about the zeta function of a variety over a finite field Over the last ten years or so researchers in various areas Hodge theory algebraic K theory

polylogarithms automorphic forms L functions  $\ell$  adic representations trigonometric sums and algebraic cycles have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area Thus the theory holds the potential of enriching and unifying these areas These two volumes contain the revised texts of nearly all the lectures presented at the AMS IMS SIAM Joint Summer Research Conference on Motives held in Seattle in 1991 A number of related works are also included making for a total of forty seven papers from general introductions to specialized surveys to research papers

Ball and Surface Arithmetics Rolf-Peter Holzapfel, 2013-04-17 This monograph is based on the work of the author on surface theory con nected with ball uniformizations and arithmetic ball lattices during several years appearing in a lot of special articles The first four chapters present the heart of this work in a self contained manner up to well known ba sic facts increased by the new functorial concept of orbital heights living on orbital surfaces It is extended in chapter 6 to an explicit HURWITZ theory for CHERN numbers of complex algebraic surfaces with the mildest singularities which are necessary for general application and proofs The chapter 5 is dedicated to the application of results in earlier chapters to rough and fine classifications of PICARD modular surfaces For this part we need additionally the arithmetic work of FEUSTEL whose final results are presented without proofs but with complete references We had help ful connections with Russian mathematicians around VENKOV VINBERG MANIN SHAFAREVICH and the nice guide line of investigations of HILBERT modular surfaces started by HIRZEBRUCH in Bonn More recently we can refer to the independent until now study of Zeta functions of PICARD modular surfaces in the book L R edited by LANGLANDS and RAMAKR ISHN AN The basic idea of introducing arrangements on surfaces comes from the monograph BHH BARTHEL HOFER HIRZEBRUCH where linear ar rangements on the complex projective plane  $p^2$  play the main role
