Theory Of Cubature Formulas:

   The Theory of Cubature Formulas S.L. Sobolev,Vladimir L. Vaskevich,2013-06-29 This volume considers various methods for constructing cubature and quadrature formulas of arbitrary degree These formulas are intended to approximate the calculation of multiple and conventional integrals over a bounded domain of integration The latter is assumed to have a piecewise smooth boundary and to be arbitrary in other aspects Particular emphasis is placed on invariant cubature formulas and those for a cube a simplex and other polyhedra Here the techniques of functional analysis and partial differential equations are applied to the classical problem of numerical integration to establish many important and deep analytical properties of cubature formulas The prerequisites of the theory of many dimensional discrete function spaces and the theory of finite differences are concisely presented Special attention is paid to constructing and studying the optimal cubature formulas in Sobolev spaces As an asymptotically optimal sequence of cubature formulas a many dimensional abstraction of the Gregory quadrature is indicated Audience This book is intended for researchers having a basic knowledge of functional analysis who are interested in the applications of modern theoretical methods to numerical mathematics   An Introduction to the Theory of Cubature Formulas and Some Aspects of Modern Analysis Sergeĭ L'vovich Sobolev,1974   **Cubature Formulas & Modern Analysis** Igor Sobolev,1993-04-15 Translated from the Russian revised and updated 1988 edition Cubature formulas for calculating the volumes of bodies in multidimensional space were named by analogy with quadrature formulas used to calculate the areas of plane figures Topics include basic concepts and formulations the polyharmonic equation simple problems of the theory of computations order of convergence of cubature formulas considering a regular boundary layer optimal formulas and formulas for rational polyhedra Annotation copyright by Book News Inc Portland OR

   Euclidean Design Theory Masanori Sawa,Masatake Hirao,Sanpei Kageyama,2019-07-23 This book is the modern first treatment of experimental designs providing a comprehensive introduction to the interrelationship between the theory of optimal designs and the theory of cubature formulas in numerical analysis It also offers original new ideas for constructing optimal designs The book opens with some basics on reproducing kernels and builds up to more advanced topics including bounds for the number of cubature formula points equivalence theorems for statistical optimalities and the Sobolev Theorem for the cubature formula It concludes with a functional analytic generalization of the above classical results Although it is intended for readers who are interested in recent advances in the construction theory of optimal experimental designs the book is also useful for researchers seeking rich interactions between optimal experimental designs and various mathematical subjects such as spherical designs in combinatorics and cubature formulas in numerical analysis both closely related to embeddings of classical finite dimensional Banach spaces in functional analysis and Hilbert identities in elementary number theory Moreover it provides a novel communication platform for design theorists in a wide variety of research fields
