Theory Of Conscious Thought:

Theories of Consciousness William Seager, 2016-02-12 Despite recent strides in neuroscience and psychology that have deepened understanding of the brain consciousness remains one of the greatest philosophical and scientific puzzles The second edition of *Theories of Consciousness An Introduction and Assessment* provides a fresh and up to date introduction to a variety of approaches to consciousness and contributes to the current lively debate about the nature of consciousness and whether a scientific understanding of it is possible After an initial overview of the status and prospects of physicalism in the face of the problem of consciousness William Seager explores key themes from Descartes the founder of the modern problem of consciousness He then turns to the most important theories of consciousness identity theories and the generation problem higher order thought theories of consciousness self representational theories of consciousness Daniel Dennett s theory of consciousness attention based theories of consciousness representational theories of consciousness conscious intentionality panpsychism neutral monism Thoroughly revised and expanded throughout this second edition includes new chapters on animal consciousness reflexive consciousness combinatorial forms of panpsychism and neutral monism as well as a significant new chapter on physicalism emergence and consciousness The book s broad scope depth of coverage and focus on key philosophical positions and arguments make it an indispensable text for those teaching or studying philosophy of mind and psychology It is also an excellent resource for those working in related fields such as cognitive science and the neuroscience of consciousness

Consciousness Peter Carruthers, 2005-05-26 Peter Carruthers s essays on consciousness and related issues have had a substantial impact on the field and many of his best are now collected here in revised form The first half of the volume is devoted to developing elaborating and defending against competitors one particular sort of reductive explanation of phenomenal consciousness which Carruthers now refers to as dual content theory Phenomenal consciousness the feel of experience is supposed to constitute the hard problem for a scientific world view and many have claimed that it is an irredeemable mystery But Carruthers here claims to have explained it He argues that phenomenally conscious states are ones that possess both an analog fine grained intentional content and a corresponding higher order analog content representing the first order content of the experience It is the higher order analog content that enables our phenomenally conscious experiences to present themselves to us and that constitutes their distinctive subjective aspect or feel The next two chapters explore some of the differences between conscious experience and conscious thought and argue for the plausibility of some kind of eliminativism about conscious thinking while retaining realism about phenomenal consciousness Then the final four chapters focus on the minds of non human animals Carruthers argues that even if the experiences of animals aren t phenomenally conscious as his account probably implies this needn t prevent the frustrations and sufferings of animals from being appropriate objects of sympathy and concern Nor need it mean that there is any sort of radical Cartesian divide between our minds and theirs of deep significance for comparative psychology In the final chapter he

argues provocatively that even insects have minds that include a belief desire perception psychology much like our own So mindedness and phenomenal consciousness couldn't be further apart Carruthers's writing throughout is distinctively clear and direct The collection will be of great interest to anyone working in philosophy of mind or cognitive science

Consciousness and Self-Consciousness Rocco J. Gennaro, 1996-03-20 This interdisciplinary work contains the most sustained attempt at developing and defending one of the few genuine theories of consciousness Following the lead of David Rosenthal the author argues for the so called higher order thought theory of consciousness This theory holds that what makes a mental state conscious is the presence of a suitable higher order thought directed at the mental state In addition the somewhat controversial claim that consciousness entails self consciousness is vigorously defended The approach is mostly analytic in style and draws on important recent work in cognitive science perception artificial intelligence neuropsychology and psychopathology However the book also makes extensive use of numerous Kantian insights in arguing for its main theses and in turn sheds historical light on Kant's theory of mind A detailed analysis of the relationships between self consciousness behavior memory intentionality and de se attitudes are examples of the central topics to be found in this work Series A

Self-representational Approaches to Consciousness Uriah Kriegel,Kenneth Williford,2006

Leading theorists examine the self representational theory of consciousness as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness and the higher order monitoring theory In this pioneering collection of essays leading theorists examine the self representational theory of consciousness which holds that consciousness always involves some form of self awareness The self representational theory of consciousness stands as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness RTC and the higher order monitoring HOM theory combining elements of both RTC and HOM theory in a novel fashion that may avoid the fundamental deficiencies of each Although self representationalist views have been common throughout the history of both Western and Eastern philosophy they have been largely neglected in the recent literature on consciousness This book approaches the self representational theory from a range of perspectives with contributions from scholars in analytic philosophy phenomenology and history of philosophy as well as two longer essays by Antonio Damasio and David Rudrauf and Douglas Hofstadter The book opens with six essays that argue broadly in favor of self representationalist views which are followed by five that argue broadly against them Contributors next consider connections to such philosophical issues as the nature of propositional attitudes knowledge attention and indexical reference Finally Damasio and Rudrauf link consciousness as lived with consciousness as described in neurobiological terms and Hofstadter compares consciousness to the strange loop of mathematical self reference brought to light by G del s incompleteness theorems Contributors Andrew Brook Peter Carruthers Antonio Damasio John J Drummond Jason Ford Rocco J Gennaro George Graham Christopher S Hill Douglas R Hofstadter Terry Horgan Tomis Kapitan Uriah Kriegel Keith Lehrer Joseph Levine Robert W Lurz David Rudrauf David Woodruff Smith John Tienson Robert Van Gulick Kathleen Wider Kenneth Williford Dan Zahavi
