George Henry Radcliffe Parkinson

Theory Of Meaning:

Michael Dummett and the Theory of Meaning Darryl Gunson, 2018-08-17 Published in 1998 this book argues that in recent decades Anglo American philosophy of language has been captivated by the idea that the key to progress in this area of philosophy lies in investigating the possibility of constructing a theory of meaning This text provides an in depth critique of the Davidsonian suggestion that Tarski s work on formal definitions of truth is an important element in allowing us to understand the form that the theory of meaning should take

Ways of Meaning Mark de Bretton Platts, 1997 The philosophy of language is not an isolated philosophical discipline of merely technical interest to other philosophers Rather as Mark Platts shows the philosophy of language can help to solve traditional problems in other areas of philosophy such as metaphysics epistemology and ethics Ways of Meaning provides a clear comprehensive introduction to such issues at the forefront of philosophy Assuming only minimum knowledge of elementary formal logic the book shows how taking truth as the central notion in the theory of meaning can clarify the relations between language reality and knowledge and thus illuminate the nature of each This second edition of the book contains a new chapter on the notions of natural kind words and natural kinds Unlike other discussions of the subject this one places the semantic issues involved in the context of questions about the relations between knowing subjects and known objects The author has also added a bibliography of further readings published since the first edition appeared in 1979

The Theory of Meaning George Henry Radcliffe Parkinson, 1968 Selected writings concerned with a central theme in recent philosophy the problem of the nature and criteria of meaning

Berkeley's Doctrine of Signs Manuel Fasko, Peter West, 2024-04-22 This volume focuses on Berkeley s doctrine of signs The doctrine of signs refers to the use that Berkeley makes of a phenomenon that is central to a great deal of everyday discourse one whereby certain perceivable entities are made to stand in for as signs of something else Things signified might be other perceivable entities or they might also be unperceivable notions such as the meanings of words From his earliest published work *A New Theory of Vision* in 1710 to those works written towards the end of life including *Alciphron* in 1732 Berkeley is at pains to emphasise the crucial role that sign usage particularly but not only in language plays in human life Berkeley also connects sign usage to our human relationship with God an issue that was right of the heart of his philosophical project The contributions in this volume explore the myriad ways that Berkeley built on such insights to better understand a range of philosophical issues issues of epistemology language perception mental representation mathematics science and theology The aim of this volume is to establish that the doctrine of signs can be seen as one of the unifying themes of Berkeley s philosophy What s more this theme is one which spans his whole philosophical corpus not just his best known works like the *Principles* and the *Three Dialogues* but also his works on science mathematics and theology

Selected Lexical and Grammatical Issues in the Meaning-text Theory Leo Wanner, Igor Aleksandrovi? Mel??uk, 2007-01-01 The Meaning Text Theory MTT is a lexicon centred and dependency based theory for the description of

language using a holistic model that incorporates semantics syntax morphology and lexis This volume prepared on the occasion of Igor Mel'cuk's 70th birthday offers a cross section of the current advances in MTT and its applications The first part of the book focuses on lexical phenomena that are still largely neglected in mainstream linguistics sound symbolism as manifested by ideophones and idiosyncratic lexical relations as manifested by lexical functions LFs In particular LFs are addressed from different angles including the introduction of new standard LFs the argument structure and semantic decomposition of lexical relations captured by LFs automatic recognition of LF instances in corpora and the use of LFs in terminology and natural language processing The second part of the book deals with such prominent model oriented issues as semantic paraphrasing in MTT the role of phrase structure in MTT and syntactic analysis within MTT

John Dewey's Theory of Art, Experience, and Nature Thomas M. Alexander, 2012-02-16 Thomas Alexander shows that the primary guiding concern of Dewey's philosophy is his theory of aesthetic experience He directly challenges those critics most notably Stephen Pepper and Benedetto Croce who argued that this area is the least consistent part of Dewey's thought The author demonstrates that the fundamental concept in Dewey's system is that of experience and that paradigmatic treatment of experience is to be found in Dewey's analysis of aesthetics and art The confusions resulting from the neglect of this orientation have led to prolonged misunderstandings eventual neglect and unwarranted popularity for ideas at odds with the genuine thrust of Dewey's philosophical concerns By exposing the underlying aesthetic foundations of Dewey's philosophy Alexander aims to rectify many of these errors generating a fruitful new interest in Dewey

Nondescriptive Meaning and Reference Wayne A. Davis, 2005-07-14 Nondescriptive Meaning and Reference extends Wayne Davis's groundbreaking work on the foundations of semantics Davis revives the classical doctrine that meaning consists in the expression of ideas and advances the expression theory by showing how it can account for standard proper names and the distinctive way their meaning determines their reference He also shows how the theory can handle interjections syncategorematic terms conventional implicatures and other cases long seen as difficult for both ideational and referential theories The expression theory is founded on the fact that thoughts are event types with a constituent structure and that thinking is a fundamental propositional attitude distinct from belief and desire Thought parts ideas or concepts are distinguished from both sensory images and conceptions Word meaning is defined recursively sentences and other complex expressions mean what they do in virtue of what thought parts their component words express and what thought structure the linguistic structure expresses and unstructured words mean what they do in living languages in virtue of evolving conventions to use them to express ideas The difficulties of descriptivism show that the ideas expressed by names are atomic or basic The reference of a name is the extension of the idea it expresses which is determined not by causal relations but by its identity or content together with the nature of objects in the world Hence a name's reference is dependent on but not identical to its meaning A name is directly and rigidly referential because the extension of the idea it expresses is not determined by the extensions of component ideas

The expression theory thus has the strength of Fregeanism without its descriptivist bias and of Millianism without its referentialist or causalist shortcomings. The referential properties of ideas can be set out recursively by providing a generative theory of ideas assigning extensions to atomic ideas and formulating rules whereby the semantic value of a complex idea is determined by the semantic values of its components. Davis also shows how referential properties can be treated using situation semantics and possible worlds semantics. The key is to drop the assumption that the values of intension functions are the referents of the words whose meaning they represent and to abandon the necessity of identity for logical modalities. Many other pillars of contemporary philosophical semantics such as the twin earth arguments are shown to be unfounded.

What Is Meaning? Scott Soames, 2010-08-09. The tradition descending from Frege and Russell has typically treated theories of meaning either as theories of meanings propositions expressed or as theories of truth conditions. However propositions of the classical sort don't exist and truth conditions can't provide all the information required by a theory of meaning. In this book one of the world's leading philosophers of language offers a way out of this dilemma. Traditionally conceived propositions are denizens of a third realm beyond mind and matter grasped by mysterious Platonic intuition. As conceived here they are cognitive event types in which agents predicate properties and relations of things in using language in perception and in nonlinguistic thought. Because of this one's acquaintance with and knowledge of propositions is acquaintance with and knowledge of events of one's cognitive life. This view also solves the problem of the unity of the proposition by explaining how propositions can be genuinely representational and therefore bearers of truth. The problem in the traditional conception is that sentences utterances and mental states are representational because of the relations they bear to inherently representational Platonic complexes of universals and particulars. Since we have no way of understanding how such structures can be representational independent of interpretations placed on them by agents the problem is unsolvable when so conceived. However when propositions are taken to be cognitive event types the order of explanation is reversed and a natural solution emerges. Propositions are representational because they are constitutively related to inherently representational cognitive acts. Strikingly original. *What Is Meaning* is a major advance. *Handbook of Dialogical Self Theory and Psychotherapy* Agnieszka Konopka, Hubert Hermans, Miguel Gonçalves, 2018-11-07. In the *Handbook of Dialogical Self Theory and Psychotherapy: Bridging Psychotherapeutic and Cultural Traditions* the editors bring together a wide variety of therapeutic approaches in order to demonstrate how Dialogical Self Theory functions as a bridging framework crossing boundaries between countries and cultures. The basic message is to facilitate a theory informed dialogue between different perspectives: cognitive therapy, psychoanalytic therapy, gestalt therapy, emotion focused therapy, Eastern Indian, American and transpersonal approaches. The chapters present the theoretical notions, qualitative methods and practical implications of the presented projects with attention to their common dialogical foundation. With its bridging approach and interdisciplinary aims the *Handbook of Dialogical Self Theory and Psychotherapy* will be essential reading for

psychotherapists and counsellors in practice and training and for those who are interested in the common factors underlying a wide variety of psychotherapeutic schools and traditions

Meaning Paul Horwich, 1998 What is meaning Paul Horwich presents an original philosophical theory demonstrates its richness and defends it against all comers At the core of his theory is the idea made famous by Wittgenstein that the meaning of a word derives from its use Horwich articulates this idea in a new way that will restore it to the prominence that it deserves He surveys the diversity of valuable insights into meaning that have been gained in the twentieth century and seeks to accommodate them within his theory His aim is not to correct a common sense view of meaning but to vindicate it he seeks to take the mystery out of meaning Horwich s 1990 book *Truth* established itself both as the definitive exposition and defence of a notable philosophical theory minimalism and as a stimulating straightforward introduction to philosophical debate about truth *Meaning* now gives the broader context in which the theory of truth operates and is published simultaneously with a revised edition of *Truth* in which Horwich refines and develops his treatment of the subject in the light of subsequent discussions while preserving the distinctive format which made the book so successful The two books together present a compelling view of the relations between language thought and reality They will be essential reading for all philosophers of language

Edmund Husserl's Theory of Meaning J.N. Mohanty, 2012-12-06 In this work I have tried to present Husserl s Philosophy of thinking and meaning in as clear a manner as I can In doing this I had in mind a two fold purpose I wanted on the one hand to disentangle what I have come to regard as the central line of thought from the vast mass of details of the *Logische Untersuchungen* and the *Formale und transzendente Logik* On the other hand I tried to take into consideration the immense developments in logic and semantics that have taken place since Husserl s major logical studies were published It is my belief that no one to day can look back upon the philosophers of the past except in the light of the admirable progress achieved and consolidated in the fields of logic and semantics in recent times Fortunately enough from this point of view Husserl fares remarkably well He certainly anticipated many of those recent investigations What is more a true understanding and appraisal of his logical studies is not possible except in the light of the corresponding modern investigations This last consideration may provide us with some explanation of the rather puzzling fact that orthodox Husserlian scholarship both within and outside Germany has not accorded to his logical studies the central importance that they from all points of view unmis takeably deserve

Studies in Functional Logical Semiotics of Natural Language Jerzy Pelc,1971 Meaning, Expression and Thought Wayne A. Davis,2002-11-11 This philosophical treatise on the foundations of semantics is a systematic effort to clarify deepen and defend the classical doctrine that words are conventional signs of mental states principally thoughts and ideas and that meaning consists in their expression This expression theory of meaning is developed by carrying out the Gricean programme explaining what it is for words to have meaning in terms of speaker meaning and what it is for a speaker to mean something in terms of intention But Grice's own formulations are rejected and alternatives developed The foundations of the expression theory are explored at length and the author develops the theory of thought as a fundamental cognitive phenomenon distinct from belief and desire argues for the thesis that thoughts have parts and identifies ideas or concepts with parts of thoughts This book will appeal to students and professionals interested in the philosophy of language
