

Types of Vibrations:

(ii) Linear and Non-linear vibration:

- If the basic components of a vibrating system, namely the spring, the mass and the damper behave in a linear manner, the resulting vibrations caused are known as **linear vibrations**. These are governed by linear differential equations. It follows the law of superposition.
- On the other hand, if any of the basic components of a vibratory system behave in a non-linear manner, the resulting vibration is called **non-linear vibration**. In this case, the governing differential equation is also non-linear. It does not follow the law of superposition.
