Theory Reasoning In Connection Calculi:

Theory Reasoning in Connection Calculi Peter Baumgartner,2005-07-11 The ability to draw inferences is a central operation in any artificial intelligence system Automated reasoning is therefore among the traditional disciplines in AI Theory reasoning is about techniques for combining automated reasoning systems with specialized and efficient modules for handling domain knowledge called background reasoners Connection methods have proved to be a good choice for implementing high speed automated reasoning systems They are the starting point in this monograph in which several theory reasoning versions are defined and related to each other A major contribution of the book is a new technique of linear completion allowing for the automatic construction of background reasoners from a wide range of axiomatically given theories The emphasis is on theoretical investigations but implementation techniques based on Prolog are also covered

Automated Deduction - A Basis for Applications Volume I Foundations - Calculi and Methods Volume II Systems and Implementation Techniques Volume III Applications Wolfgang Bibel,P.H. Schmitt,2013-03-09 1 BASIC CONCEPTS OF INTERACTIVE THEOREM PROVING Interactive Theorem Proving ultimately aims at the construction of powerful reasoning tools that let us computer scientists prove things we cannot prove without the tools and the tools cannot prove without us Interaction typically is needed for example to direct and control the reasoning to speculate or generalize strategic lemmas and sometimes simply because the conjecture to be proved does not hold In software verification for example correct versions of specifications and programs typically are obtained only after a number of failed proof attempts and subsequent error corrections Different interactive theorem provers may actually look quite different They may support different logics first or higher order logics of programs type theory etc may be generic or special purpose tools or may be targeted to different applications Nevertheless they share common concepts and paradigms e.g architectural design tactical reasoning etc The aim of this chapter is to describe the common concepts design principles and basic requirements of interactive theorem provers and to explore the bandwidth of variations Having a person in the loop strongly influences the design of the proof tool proofs must remain comprehensible proof rules must be high level and human oriented persistent
