integrated analysis of multi omics data such as single cell ATAC seq DNA sequencing and proteomics providing more comprehensive cellular functional information and revealing the complex mechanisms of gene expression regulation Simultaneously the application of novel computational tools and algorithms enables researchers to extract meaningful biological information from complex data and uncover the key pathways and molecular mechanisms in inflammatory responses Therefore this Research Topic aims to showcase the latest progress of single cell sequencing technologies in inflammation research We invite researchers interested in this topic to submit original research brief research reports and review articles mainly but not limited to the following sub themes 1 New applications of single cell RNA sequencing in the study of inflammatory processes 2 Single cell epigenomics and transcriptomics in inflammatory diseases 3 Identification of key inflammatory mediators signaling pathways and immune cell heterogeneity at the single cell level 4 Interactions between immune and non immune cells in the inflammatory microenvironment 5 Identification of novel therapeutic targets and the development of personalized medical approaches for inflammatory diseases based on single cell analysis 6 Single cell analysis of drug responses and resistance mechanisms in inflammation 7 Innovations in single cell sequencing technologies related to inflammation research Please note that manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this Research Topic

COPD Clinical Perspectives Ralph J. Panos, 2014-07-16. Chronic Obstructive Pulmonary Disease (COPD) is an increasingly recognized cause of morbidity and mortality. Over the next 10 years, deaths due to COPD are expected to increase by 30%, and by 2030, COPD is estimated to be the third leading cause of death worldwide. Research into the pathophysiology and management of COPD over the past decade has progressed immensely, with greater understanding of the global burden of COPD, its pathophysiology, better understanding of the multisystemic manifestations of COPD, and most importantly, novel and more effective therapeutic strategies. This volume brings together an international group of experts in COPD to provide in-depth reviews of clinical perspectives into COPD. Topics range from the diagnosis of airflow limitation by spirometry, distinguishing COPD from another common obstructive lung disease, asthma, alpha-1 antitrypsin deficiency, and opportunities to diagnose this most common hereditary cause of COPD, and as a paradigm for the development of novel therapeutics, the overlap syndrome, the concurrence of two epidemic disorders, COPD and obstructive sleep apnea, and pulmonary rehabilitation, one of the most effective treatments for COPD.

Pharmacology and Therapeutics of Asthma and COPD Clive P. Page, Peter J. Barnes, 2004-01-07.
