Thermal Conductivity 14:

Thermal Conductivity 14 P. Klemens, 2013-11-11 It was seven years ago this month when I had the pleasure of writing the Foreword to the Proceedings of the Eighth Conference on Thermal Conductivity hosted by TPRC Purdue University in 1968 Since then this Conference has developed to the point where one can say it has just entered a new phase At its meeting in June 1975 the Board of Governors of the International Thermal Conductivity Conferences passed a resolution which formalizes two main policies that were felt to be desirable for a number of years A key item of the resolution was for CINDAS Purdue University to become the permanent Sponsor of the Conferences and in this capacity assist the Conferences in all matters which will result in the effective implementation of its goals and mission In short CINDAS will serve as a home base for the Conferences thus providing continuity and a permanent point of contact CINDAS Purdue University is pleased to accept this responsibility as it is well within its mission to promote the advancement and dissemination of knowledge on thermophysical properties of matter A second important aspect of the Conference resolution was the establishment of a policy to publish the Proceedings of future conferences on a continuing and uniform basis effective with this the Fourteenth Conference Thermal Conductivity 26 Ralph B. Thermal Conductivity of 14 Metals and Alloys Up to 1100

Degrees F Jerry E. Evans, United States. National Advisory Committee for Aeronautics, 1951 The thermal conductivity of 14 metals and alloys was determined in temperature ranges having a maximum of 110 degrees F The metals included steels high temperature alloys molybdenum disilicide aluminum alloys brass and silver The steels high temperature alloys and brass with one exception have conductivities that increase with increasing temperature AISI 402 steel silver molybdenum disilicide and also 14S aluminum alloy after heat treatment have conductivities that decrease as the temperature is increased No definite trend was established for 14S and 24S aluminum alloys unless heat treated before testing The conductivity of the 355 aluminum alloy was fairly constant after the first run although it received no heat treatment other than that which it might have obtained during the test Nuclear Science Abstracts, 1961 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1-33 initially created by DOE's predecessor the U S Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U S Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available
