Handbook of Thermal Analysis and Calorimetry Volume 1 Principles and Practice describes the basic background information common to thermal analysis and calorimetry in general Thermodynamic and kinetic principles are discussed along with the instrumentation and methodology associated with thermoanalytical and calorimetric techniques The purpose is to collect the discussion of these general principles and minimize redundancies in the subsequent volumes that are concerned with the applications of these principles and methods More unique methods which pertain to specific processes or materials are covered in later volumes Glucose, Insulin, Potassium, and the Heart Richard J. Kones, 1975 Octanol-Water Partition Coefficients James M. Sangster, 1997-05-28 The octanol water partition coefficient is a laboratory measured property of a substance It provides a thermodynamic measure of the tendency of the substance to prefer a non aqueous or oily milieu rather than water i e its hydrophilic lipophilic balance Partition coefficients are used extensively in medicinal chemistry drug design ecotoxicology and environmental chemistry The partition coefficient is recognized by governmental and international agencies U S Environmental Protection Agency OECD as a physical property of organic pollutants equal in importance to vapour pressure water solubility and toxicity Octanol Water Partition Coefficients is a comprehensive and up to date survey of the thermodynamics of partitioning and of the octanol water pair In addition all current methods of measurement are reviewed strengths and weaknesses are noted and recommendations for particular applications are given Current methods of calculation of partition coefficients are similarly surveyed and described Five of the most popular computerized methods are tested for predictive accuracy for drugs pollutants aminoacids etc The book will be of interest not only to solution chemists but to any chemists who use partition coefficients It provides a thorough understanding of the fundamentals and offers clear guidance on the choice of methods of measurement and calculation Contents Introduction Thermodynamics and Extrathermodynamics of Partitioning Experimental Methods of Measurement Discussion of Measurement Methods Methods of Calculating Partitioning Coefficients Discussion of LogKow Predictive Methods The Wiley Series in Solution Chemistry fills the increasing need to present authoritative comprehensive and fully up to date accounts of the many aspects of solution chemistry Internationally recognized experts from research or teaching institutions in various countries are invited to contribute to the series Aeronautical Engineering Index , 1959 Aerospace Engineering Index , 1958 **The Journal of General Physiology** , 1963 **Proceedings of the ASME Advanced Energy Systems Division** American Society of Mechanical Engineers.
