Trees And Networks In Biological Models:

Trees and Networks in Biological Models N. MacDonald,1983 *Computational Methods in Molecular Biology* S.L. Salzberg,D.B. Searls,S. Kasif,1998-06-19 Computational biology is a rapidly expanding field and the number and variety of computational methods used for DNA and protein sequence analysis is growing every day These algorithms are extremely valuable to biotechnology companies and to researchers and teachers in universities This book explains the latest computer technology for analyzing DNA RNA and protein sequences Clear and easy to follow designed specifically for the non computer scientist it will help biologists make better choices on which algorithm to use New techniques and demonstrations are elucidated as are state of the art problems and more advanced material on the latest algorithms The primary audience for this volume are molecular biologists working either in biotechnology companies or academic research environments individual researchers and the institutions they work for and students Any biologist who relies on computers should want this book A secondary audience will be computer scientists developing techniques with applications in biology An excellent reference for leading techniques it will also help introduce computer scientists to the biology problems This is an outstanding work which will be ideal for the increasing number of scientists moving into computational biology Network Biology Intawat Nookaew,2017-05-03 This book review series presents current trends in modern biotechnology The aim is to cover all aspects of this interdisciplinary technology where knowledge methods and expertise are required from chemistry biochemistry microbiology genetics chemical engineering and computer science Volumes are organized topically and provide a comprehensive discussion of developments in the respective field over the past 3 5 years The series also discusses new discoveries and applications Special volumes are dedicated to selected topics which focus on new biotechnological products and new processes for their synthesis and purification In general special volumes are edited by well known guest editors The series editor and publisher will however always be pleased to receive suggestions and supplementary information Manuscripts are accepted in English *Plant and Crop Modelling* J. H. M. Thornley,Ian R. Johnson,1990 This book provides extensive information on the use of mathematics and computers in plant and crop physiology It is intended to help plant physiologists describe complex biological ideas in new ways especially through the use of mathematical models that can provide valuable insights while giving ideas and hypotheses a new quantitative definition **Mathematical Foundations of Data Science Using R** Frank Emmert-Streib,Salissou Moutari,Matthias Dehmer,2022-10-24 The aim of the book is to help students become data scientists Since this requires a series of courses over a considerable period of time the book intends to accompany students from the beginning to an advanced understanding of the knowledge and skills that define a modern data scientist The book presents a comprehensive overview of the mathematical foundations of the programming language R and of its applications to data science *Connectionist Models of Memory and Language (PLE: Memory)* Joseph P. Levy,Dimitrios Bairaktaris,John Bullinaria,Paul Cairns,2014-05-09 Connectionist modelling and neural network

applications had become a major sub field of cognitive science by the mid 1990s In this ground breaking book originally published in 1995 leading connectionists shed light on current approaches to memory and language modelling at the time The book is divided into four sections Memory Reading Computation and statistics Speech and audition Each section is introduced and set in context by the editors allowing a wide range of language and memory issues to be addressed in one volume This authoritative advanced level book will still be of interest for all engaged in connectionist research and the related areas of cognitive science concerned with language and memory

Artificial Life iii Christopher G. Langton, 1994-01-20 Artificial Life is the study of man made systems that exhibit behaviors characteristic of natural living systems such as self organization reproduction development and even evolution It complements the traditional biological sciences concerned with the analysis of living organisms by attempting to synthesize and study life like behaviors within computers or other alternative media By extending the empirical foundation upon which biology rests beyond the carbon chain based life that has evolved on Earth Artificial Life can contribute to the theoretical biology by locating life as we know it within the larger context of life as it could be in any of its possible physical incarnations
