**Community Based Water Management and Social Capital** Kiyoshi Kobayashi, Ismu Rini Dwi Ari, Isabel C. Escobar, Andrea Schaefer, 2014-04-14 Community Based Water Management and Social Capital provides scientific understanding of community based water management and how to secure responsible management to satisfy quality and quantity requirements. It shows how community based water management can be synchronized with public water service by introducing the most recent field experiments and theoretical studies in economics, social science, engineering, and regional planning which include game theory, microeconomics, econometric statistics, social network analysis, social choice, and micro finance. Community Based Water Management and Social Capital presents field experiments and theoretical studies in economics, social science, engineering, and regional planning to investigate important questions: what motivates people to involve in voluntary water management? what is the effect of participatory approach in water management? how does social capital work in the voluntary actions? what are key factors for effective governance for water management with diverse actors: local people, enterprise, and government? what is necessary for proper water allocation? vi how to synchronize public water service with community based water management. The book provides students, researchers, practitioners, and governments with a comprehensive account of the current situation and perspectives on voluntary water management. It delivers a new scientific understanding on sustainable water management schemes and appropriate institutional social structures to secure inalienable rights to access to water. Author: Kiyoshi Kobayashi, Kyoto University, Japan; Ibnu Syabri, Institute of Technology Bandung, Indonesia; Ismu Rini Dwi Ari, Brawijaya University, East Java; Hayeong Jeong, Isabel C. Escobar, Andrea Schaefer.

**Water Management in the 21st Century** Terence R. Lee, 1999. The challenge to manage the allocation of water efficiently and equably will become a dominant theme of the new millennium. At a time when the cost of obtaining fresh water is rising throughout the globe, Terence Lee analyses the means for establishing and operating effective water markets. He proposes the application of economic instruments and the transfer of water management administration to the private sector as a means to guarantee acceptable water quality in the future in both developed and developing countries. This treatment of water as an economic commodity implies a change in the traditional role of governments in water management. The themes explored in this book will be of interest to environmental and resource economists as well as practitioners and policymakers.

Water Governance, Policy and Knowledge Transfer Cheryl De Boer, Joanne Vinke-de Kruijf, Gül Özerol, Hans Th. A. Bressers, 2013-05-29. In an increasingly global community of researchers and practitioners, new technologies and communication means have made the transfer of policies from one country or region to another progressively more prevalent. There has been a lot of attention in the field of public administration paid to policy transfer and institutional transplantation. This book aims to create a better understanding of such transfers in the water management sector. These include the adoption of modern water management concepts such as integrated water resources management and forms of water

governance which are strongly promoted and sometimes also imposed by various international organizations Transfers also occur within the scope of development aid or for the purpose of creating business opportunities In addition many research organisations consultancies and governmental agencies are involved in cross border work The purpose of this book is therefore to present practical examples of the transfer of modern water management from one locality to another and to critically discuss the transferability of policy and governance concepts by analysing the contextual needs and factors Case studies are included from North America Europe the Middle East and Asia It is argued that in many cases context matters in water management and that there is no panacea or universal concept that can be applied to all countries or regions with different political economic cultural and technological contexts Yet it is also shown that some countries are facing pressing and similar water management issues that cut across national borders and hence the transfer of knowledge may be beneficial
