Software Defined Radio Markus Dillinger, Kambiz Madani, Nancy Alonistioti, 2005-08-05 Software defined radio SDR is a hot topic in the telecommunications field with regard to wireless technology It is one of the most important topics of research in the area of mobile and personal communications SDR is viewed as the enabler of global roaming and a platform for the introduction of new technologies and services into existing live networks It therefore gives networks a greater flexibility into mobile communications It bridges the inter disciplinary gap in the field as SDR covers two areas of development namely software development and digital signal processing and the internet It extends well beyond the simple re configuration of air interface parameters to cover the whole system from the network to service creation and application development Reconfigurability entails the pervasive use of software reconfiguration empowering upgrades or patching of any element of the network and of the services and applications running on it It cuts across the types of bearer radio systems Paging to cellular wireless local area network to microwave terrestrial to satellite personal communications to broadcasting enable the integration of many of today s disparate systems in the same hardware platform Also it cuts across generation second to third to fourth This volume complements the already published volumes 1 and 2 of the Wiley Series in Software Radio The book discusses the requirements for reconfigurability and then introduces network architectures and functions for reconfigurable terminals Finally it deals with reconfiguration in the network The book also provides a comprehensive view on reconfigurability in three very active research projects as CAST MOBIVAS and TRUST SCOUT Key features include Presents new research in wireless communications Summarises the results of an extensive research program on software defined radios in Europe Provides a comprehensive view on reconfigurability in three very active research projects as CAST Configurable radio with Advanced Software Technology MOBIVAS Downloadable MOBILE Value Added Services through Software Radio and Switching Integrated Platforms TRUST Transparently Re configurable Ubiquitous Terminal and SCOUT Smart User Centric Communication Environment

Software Defined Radio John Bard, Vincent J. Kovarik, Jr, 2007-04-30 The Software Communications Architecture SCA establishes an implementation independent framework for the development of Joint Tactical Radio System software configurable radios It specifies the Operating Environment services and interfaces that applications use Software Defined Radio The Software Communications Architecture focuses on the issues and benefits associated with developing a radio system in compliance with the SCA specification This book provides a comprehensive practical introduction to building a SCA compliant system taking the reader through the historical and conceptual background to help filling in the gaps between the intent of the SCA specification and the practice Key features Presents a practical approach to the Software Communications Architecture Provides an example oriented understanding of the usage of the SCA and thus allows the reader to extend the concepts and practice to more complicated multi processor distributed environments Covers the Operating Environment a Core framework CORBA middleware POSIX operating systems and

Domain profiles Features an accompanying website with appendices and links to further information on the SCA This invaluable reference will provide applications programmers designers professional researchers wireless manufacturers and operators with an indispensable guide to the Software Communications Architecture Advanced undergraduate and postgraduate students on mobile and wireless communications courses will also find this to be an excellent guide to the topic

Green Software Defined Radios Liesbet Van der Perre,Jan Craninckx,Antoine Dejonghe,2008-12-21 Green Software Defined Radios the title of this book may have originated from a lack of inspiration and the combination of hard work jet lag and drinking green tea The message we want to convey however is that SDRs are a promising technology for the future providing they are designed for efficient usage of scarce resources energy and spectrum In the last years the R D teams focusing on wireless communication around the world and at IMEC specifically have realized great breakthroughs It is our honor building on this knowledge to bring a comprehensive overview of the essential technologies We are grateful that Springer is willing to publish in their collection on radio technologies a book on green SDRs a weird species still today yet maybe the baseline for the day after tomorrow Dear reader we wish that you find in the following pages including the references some interesting insights and that this book may live more or less up to your expectations and hopefully more than less This book is closing state that the quest for Green SDR has not ended this is just the beginning Concerning this book however we are happy that today the opposite is true We want to acknowledge our colleagues at IMEC for their great scientific contribution and even more for the enjoyable cooperation
