Solar Polarization:

Solar Polarization K.N. Nagendra, Jan Stenflo, 1999-07-31 Novel instruments for high precision imaging polarimetry have opened new possibilities including for exploring effects in radiative scattering atomic physics spectral line formation and radiative transfer This volume gives a comprehensive and up to date account of this rapidly evolving and interdisciplinary field of science

Solar Polarization Jan Olof Stenflo, K.N. Nagendra, 2012-12-06 Much progress has been made in recent years in understanding the complex physics of polarized radiation in the sun and stars This physics includes vector radiative transfer and spectral line formation in the presence of magnetic fields scattering theory and coherence effects partial redistribution and turbulent magnetic fields numerical techniques and Stokes inversion as well as concepts for polarimetric imaging with a precision limited only by photon statistics The present volume gives a comprehensive and up to date account of this rapidly evolving field of science

Magnetic Coupling between the Interior and Atmosphere of the Sun S.S. Hasan, R. J. Rutten, 2010-03-10 Solar physics in India has a tradition that can be traced to the setting up of the Kodaikanal Observatory in 1899 when the Madras Observatory was relocated to a high altitude site with a view to initiate observations of the sun This conference on Magnetic Coupling between the Interior and the Atmosphere of the Sun during 2 5 December 2008 was planned to coincide with centenary of the Evershed effect discovery at Kodaikanal in 1909 The aim of this meeting was to bring to a critical focus a comprehensive understanding of the important issues pertaining to solar magnetism with particular emphasis on the various MHD processes that operate in the solar atmosphere The current status of magnetic field measurements and their implications in the light of recent theories and numerical modeling that address the fundamental scales and processes in the highly magnetized turbulent plasma were reviewed during this meeting The meeting was timely for the following reasons Space observations such as from SOHO and TRACE have provided a wealth of multiwavelength observations on processes occurring in regions of the atmosphere extending from the photosphere up to the outer corona With the launch of Hinode and STEREO in 2006 and of SDO Solar Dynamics Observatory shortly this conference provided a platform for in depth discussions on new results from various space missions as well as a comparison with ground based observing facilities such as the Swedish 1 m Solar Telescope Using sophisticated image processing techniques such as ratiometrically generated observations with a resolution better than 0.1 arcsec thereby yielding more informative diagnostics for instance of the microstructure of ux tubes

Polarimetry of Stars and Planetary Systems Ludmilla Kolokolova, James Hough, Anny-Chantal Levasseur-Regourd, 2015-05-14 Summarising the striking advances of the last two decades this reliable introduction to modern astronomical polarimetry provides a comprehensive review of state of the art techniques models and research methods Focusing on optical and near infrared wavelengths each detailed up to date chapter addresses a different facet of recent innovations including new instrumentation techniques and theories new methods based on laboratory studies enabling the modelling of polarimetric characteristics for a wide variety of astronomical objects emerging fields of

polarimetric exploration including proto planetary and debris discs icy satellites transneptunian objects exoplanets and the search for extraterrestrial life and unique results produced by space telescopes and polarimeters aboard exploratory spacecraft With contributions from an international team of accomplished researchers this is an ideal resource for astronomers and researchers working in astrophysics earth sciences and remote sensing keen to learn more about this valuable diagnostic tool The book is dedicated to the memory of renowned polarimetrist Tom Gehrels

Microphysics of Cosmic Plasmas André Balogh, Andrei Bykov, Peter Cargill, Richard Dendy, Thierry Dudok de Wit, John Raymond, 2014-01-15 Presents a comprehensive review of physical processes in astrophysical plasmas This title presents a review of the detailed aspects of the physical processes that underlie the observed properties structures and dynamics of cosmic plasmas An assessment of the status of understanding of microscale processes in all astrophysical collisionless plasmas is provided The topics discussed include turbulence in astrophysical and solar system plasmas as a phenomenological description of their dynamic properties on all scales observational theoretical and modelling aspects of collisionless magnetic reconnection the formation and dynamics of shock waves and a review and assessment of microprocesses such as the hierarchy of plasma instabilities non local and non diffusive transport processes and ionisation and radiation processes In addition some of the lessons that have been learned from the extensive existing knowledge of laboratory plasmas as applied to astrophysical problems are also covered This volume is aimed at graduate students and researchers active in the areas of cosmic plasmas and space science Originally published in Space Science Reviews journal Vol 278 2 4 2013

Coronal Magnetometry Sarah E. Gibson, Laurel A. Rachmeler, Stephen M. White, 2017-07-11 Magnetism defines the complex and dynamic solar corona It determines the magnetic loop structure that dominates images of the corona and stores the energy necessary to drive coronal eruptive phenomena and flare explosions At great heights the corona transitions into the ever outflowing solar wind whose speed and three dimensional morphology are controlled by the global coronal magnetic field Coronal magnetism is thus at the heart of any understanding of the nature of the corona and essential for predictive capability of how the Sun affects the Earth Coronal magnetometry is a subject that requires a concerted effort to draw together the different strands of research happening around the world Each method provides some information about the field but none of them can be used to determine the full 3D field structure in the full volume of the corona Thus we need to combine them to understand the full picture The purpose of this Frontiers Research Topic on Coronal Magnetometry is to provide a forum for comparing and coordinating these research methods and for discussing future opportunities
