Rodriguez-Ramos, 2001-08-02 *Spillover and Mobility of Species and Solid Surfaces* collects the papers which were presented at the Fifth International Conference Spillover either as oral or poster contributions as well as the summaries of the invited lectures This congress and its publication in the Studies on Surface Science and Catalysis series follow the tradition of previous conferences on spillover initiated in Lyon 1983 and continued in Leipzig 1989 Kyoto 1993 and Dalian 1997 For the fifth conference held in S L el Escorial Madrid the organising committee has attempted to compile representative contributions which illustrate the advances in understanding the spillover phenomenon since 1997 Spillover is a process taking place during the interface of gas reactant molecules mainly hydrogen and oxygen on solid surfaces However different contributions to the more general area of the chemistry at surfaces related with the mobility and migration of species diffusion through membranes fuel cell catalysts etc have also been included In fact the title of the present volume summarizes this attempt to extend the conference topics towards dynamics at surfaces Among the 70 contributions received the 56 accepted papers were selected on the basis of the reports of at least two international reviewers according to standards comparable to those applied for other specialised journals These papers are from 21 different countries *Solid Surfaces*, 1993 *Proceedings of the International Conference on Solid Surfaces : ICSS ; 8*, 1992 **Proceedings of the International Symposium Surface Waves in Solids and Layered Structures, Novosibirsk, USSR, July 1-4, 1986**

Rudzinski, 1996-12-17 The fact that the surfaces of real solids are geometrically distorted and chemically non uniform has long been realized by the scientists investigating various phenomena occurring on solid surfaces Even in the case when diffraction experiments show a well organized bulk solid structure the surface atoms or molecules will usually exhibit a much smaller degree of surface organization In addition to the results obtained from electron diffraction this can be seen in the impressive images obtained from STM and AFM microscopies This geometric and chemical disorder is the source of the energetic heterogeneity for molecules adsorbing on real solid surfaces Hundreds of papers have been published showing that this heterogeneity is a major factor in determining the behaviour of real adsorption systems Studies of adsorption on energetically heterogeneous surfaces have proceeded along three somewhat separate paths with only minor coupling of ideas One was the study of adsorption equilibria on heterogeneous solid surfaces The second path was the study of time evolution of adsorption processes such as surface diffusion or adsorption desorption kinetics on heterogeneous surfaces and the third was the study of adsorption in porous solids or more generally adsorption in systems with limited dimensions The present monograph is a first attempt to provide a synthesis of the ways that surface geometric and energetic heterogeneities affect both the equilibria and the time evolution of adsorption on real solids The book contains 17 chapters written by a team of internationally recognized specialists some of whom have already published books on adsorption *Proceedings of the International Conference on Solid Surfaces : ICSS ; 3, 1977* *Proceedings of the Fourth International Conference on Solid Surfaces ... and the Third European Conference on Surface Science ...*, Sept. 22-26, 1980, Cannes, France, 1980
