The Ropner Story:

The Ropner Story Ian Dear,1986 *The Evolution and Significance of the Powered Bulk Carrier* Roy Fenton,2023-04-03 The book is the first to detail the 170 year evolution of the powered bulk carriers which continue to have a major role in the world's trades and economies Their design and technological development is traced from the screw colliers of the 1850s which revolutionised the British coastal coal trade The same engineering principles were applied to produce ocean going steam and later motor tramps By the end of the 19th century the capabilities and economies of these black freighters had captured from the sailing ship much of the world's trade in bulk commodities In the second half of the 20th century the tramps in turn evolved into multi purpose dry bulk carriers These workhorses of the sea transport commodities including metallic ores grain coal timber and other minerals Quantities of up to 400 000 tons are carried in the largest specialised ore carriers In a parallel development applying the same technical principles produced smaller yet efficient steam and later motor coasters which came to dominate short sea shipping The book concludes with a discussion of how the economies of transportation provided by bulk carriers have had profound effects on industrialisation globalisation and the world's economy and discusses the environmental impact of these ships

Industrial Teesside, Lives and Legacies Jonathan Warren,2017-12-04 This book evaluates the consequences of economic social environmental and cultural change on people living and working within Teesside in the North East of England It assesses the lived experiences working lives health and cultural perspectives of residents and key stakeholders in the wake of serious de industrialisation in the region The narrative is embedded within the long term industrial history of Stockton an area once dominated by steel coal and chemical industries This past still continues to shape its future and influences the ways in which that future is conceived and envisioned The author explores a biography of place analytical framework to offer a holistic view of the area which considers the interaction between the social economic cultural visual and environmental legacy of the community which is firmly grounded in the past present and future prospects of those who live and work there

Dr Iain Ropner's Casebook of Strange Events and Unusual Phenomena Dave Brooks,2008-10-10 How many times have you heard somebody you know say I knew you were going to say that or I knew that was going to happen or I'm sure this has happened before How often have you read an unusual story in the paper and wondered if there was more to the event than you're being told These are only two of the questions that have fuelled parapsychologist Dr Iain Ropner's studies over the past 20 years Dr Iain Ropner's Casebook of Strange Events and Unusual Phenomena is the first instalment of six case studies strange events that have occurred that cannot be readily explained away such as Jackie McLean's suspicions in Messages from Sibley or the perplexing phenomena that consumes the lives of a group of young boys in The Devil and the White Horse

The Ocean Class of the Second World War Malcolm Cooper,2021-12-30 This new book tells the story of the Ocean class of standard cargo ships their design building and careers and the author places them firmly in the context of the battle of the Atlantic

which was raging at the time of the first launchings They entered the vanguard of the Allied shipping effort at a time when the German U boat threat was at its most dangerous and British shipping resources were stretched to the limit They were deployed in the North Atlantic on the long supply routes around Africa to the Middle East in the Russian convoys in operations in support of the invasions of North Africa and Italy and the land campaigns which followed in the D Day landings and later amphibious operations on the south coast of France Finally some of the class joined an invasion force making its way towards Malaya when Japan surrendered in August 1945 The Oceans paid a heavy price for these accomplishments one third of the class being lost to torpedoes bombs or mines in places as far apart as the Florida coast the Norwegian Sea the Bay of Algiers and the Gulf of Oman While these achievements alone would merit an important place in histories of the war at sea the impact of the Oceans stretched far beyond the direct contribution of the ships themselves The yards where they were built also served as models for a series of new American shipyards designed to mass produce cargo vessels with such speed and in such volume as to completely reverse the mathematics of attrition which had run so badly against the Allies into 1942 Even more important the Oceans blueprints were used as the basis for the American Liberty ship the 2 700 strong fleet which finally tilted the balance of the war at sea decisively in the Allies favor and went on to underpin the post war renewal of the world merchant fleet This comprehensive new history based on extensive archival research and lavishly illustrated with contemporary photographs restores the Oceans to their rightful place in history The ships design antecedents are explained and their ordering financing and construction analyzed in full Wartime operations are covered in depth by theater and with full details of war losses and other casualties The book concludes with an assessment of their subsequent peacetime careers and a comparison to other war built designs This is a model history of a highly significant class of ship
