The Water Crisis:

Running Dry Stuart A. Kallen, 2015-01-01 As the planet's human population explodes so does the demand for water. About one out of every nine people in the world does not have access to safe drinking water while one out of every five almost 1.5 billion humans lives in a region where water demand is outstripping supply. But as demand grows supplies do not. Climate change has led to severe drought, flooding, and massive storms in key agricultural areas of the world. Industrial and agricultural water pollution threatens public health around the world. Environmental protection measures are not keeping up with energy production technologies such as fracking and the corn for fuel market, all of which affect water usage rates and safety. Both developed and undeveloped areas of the world face challenges with water delivery infrastructure. For example, undeveloped nations lack even the most basic water delivery systems. Millions of global citizens are without sanitation, altogether polluting waterways with raw sewage. In the developed world, water delivery infrastructures are aging and wasteful. Domestic and industrial overconsumption of water resources draws down supply capacity, depleting Earth's freshwater resources at an alarming rate. And in the last few decades, private corporations have begun to take over municipal water delivery, buying the rights to freshwater supplies and selling bottled water all for large profits. As the cost of clean water rises, many people can't afford the water they need for everyday use. Competition for clean water is increasing, and the stakes couldn't be higher. *Running Dry* investigates some tough questions: In a crowded world with limited water supplies, will we be able to deliver safe, clean water to an increasingly thirsty world? Can governments, businesses, and individuals work together to clean up and protect Earth's water resources? Are water conservation strategies enough to ensure a water-rich future? Or will we run dry?

The Global Water Crisis David E. Newton, 2016-04-25 How is water scarcity becoming a serious problem worldwide, including in the United States? This book provides a broad overview of water sanitation and hygiene problems faced by both developing and developed nations around the globe and suggests how these problems can be solved by imaginative and innovative thinking. Human society depends on sufficient clean water. In many parts of the world, however, this most basic commodity is in very short supply. Even in developed, first-world nations, climate change and other factors have begun to create alarming water supply issues. *The Global Water Crisis: A Reference Handbook* provides a detailed overview of this important topic, enabling readers to understand the nature of the world's water sanitation and hygiene (WASH) problems and to know what resources are best for conducting their own research on the topic. The first chapter of the book provides the historical background information pertaining to the world's water and sanitation problems; the second chapter documents the problems, explores the issues, and presents potential solutions for understanding the nature of WASH issues. The other sections provide the needed resources for readers to study the issue of the global water crisis further: perspective essays, primary documents, biographical profiles, data, and documents, an extended annotated bibliography, a chronology, and a glossary.

The Global Water Crisis Manzoor Kooloth Peedikayil, 2012 Water crisis is a serious human issue that exists when supply of water is less than demand The increase in population at geometrical rate and overuse of water for industrial purpose are considered to be the major reasons for depleting the water resources in the world Many studies show that our finite source of freshwater is getting polluted and depleted by bad weather phenomenon The climate change strongly influences the reduction in water quantity as well as quality Drinking water market has opened abundant business opportunities Consequently many multinational corporations entered into the water sector to reap enormous profits from selling water Many countries find different solutions including the modern technologies like sea water desalination to overcome water crisis But the poor nations which are the major victims of water crisis still depend on the traditional water harvesting techniques for increasing their water supply
