Matthews Jr.,2019-05-01 America was certainly the big winner of World War II being the last major country intact Euphoria hubris and a naive self confidence became hallmarks of the people This hubris was dented a bit in the 1950s when scandals erupted around the TV quiz shows that made everyoe feel so smart and the U 2 spy incident of 1960 that revealed Americans were being lied to by the government The book argues that these two events began the credibility gap that engulfed the nation later in the 1960s and continues to haunt us to this day When the War ended the United States still had its economy infrastructure and industry intact Taking up where the British Empire left off the powerful new America expanded its influence around the globe Suddenly light years ahead of any competitor Americans abandoned themselves to a haze of consumerism and entertainment trusting that they were safe and could not be harmed The contestants on the big money quiz shows turned out to be fakes and the respected TV executives were also revealed to be liars and cheats Far worse was yet to come The United States government was caught in a lie regarding the CIA s U 2 reconnaissance planes overflying the Soviet Union On the eve of a crucial summit meeting in 1960 the USSR knocked Gary Powers out of the sky

along with plenty of incriminating hardware and data Moscow delayed revealing what it knew and Washington spent ten days denying it was a spy plane then denying that President Eisenhower was aware of it The world was turning into a very scary place and soon American schoolchildren were being taught to duck under their desks if a bomb should strike Fear began to percolate into the heart of the nation

**Emotion-Oriented Systems** Paolo Petta,Catherine Pelachaud,Roddy Cowie,2011-02-04 Emotion pervades human life in general and human communication in particular and this sets information technology a challenge Traditionally IT has focused on allowing people to accomplish practical tasks efficiently setting emotion to one side That was acceptable when technology was a small part of life but as technology and life become increasingly interwoven we can no longer ask people to suspend their emotional nature and habits when they interact with technology The European Commission funded a series of related research projects on emotion and computing culminating in the HUMAINE project which brought together leading academic researchers from the many related disciplines This book grew out of that project and its chapters are arranged according to its working areas theories and models signals to signs data and databases emotion in interaction emotion in cognition and action persuasion and communication usability and ethics and good practice The fundamental aim of the book is to offer researchers an overview of the related areas sufficient for them to do credible work on affective or emotion oriented computing The book serves as an academically sound introduction to the range of disciplines involved technical empirical and conceptual and will be of value to researchers in the areas of artificial intelligence psychology cognition and user machine interaction
