Theoretical Astrophysics Matthias Bartelmann, 2013-09-03 Beginning from first principles and adopting a modular structure this book develops the fundamental physical methods needed to describe and understand a wide range of seemingly very diverse astrophysical phenomena and processes For example the discussion of radiation processes including their spectra is based on Larmor's equation and extended by the photon picture and the internal dynamics of radiating quantum systems leading to the shapes of spectral lines and the ideas of radiation transport Hydrodynamics begins with the concept of phase space distribution functions and Boltzmann's equation and develops ideal viscous and magneto hydrodynamics all from the vanishing divergence of an energy momentum tensor opening a natural extension towards relativistic hydrodynamics Linear stability analysis is introduced and used as a common and versatile tool throughout the book Aimed at students at graduate level lecturers teaching courses in theoretical astrophysics or advanced topics in modern astronomy this book with its abundant examples and exercises also serves as a reference and an entry point for more advanced researchers wanting to update their knowledge of the physical processes that govern the behavior and evolution of astronomical objects

Theoretical Astrophysics: Volume 3, Galaxies and Cosmology T. Padmanabhan, 2000 This timely volume provides comprehensive coverage of all aspects of cosmology and extragalactic astronomy at an advanced level Beginning with an overview of the key observational results and necessary terminology it covers important topics the theory of galactic structure and galactic dynamics structure formation cosmic microwave background radiation formation of luminous galaxies in the universe intergalactic medium and active galactic nuclei This self contained text has a modular structure and contains over one hundred worked exercises It can be used alone or in conjunction with the previous two accompanying volumes Volume I Astrophysical Processes and Volume II Stars and Stellar Systems

Theoretical Astrophysics: Volume 1, Astrophysical Processes T. Padmanabhan, 2000-10-02 Graduate students and researchers in astrophysics and cosmology need a solid understanding of a wide range of physical processes This clear and authoritative book has been designed to help them to develop the necessary toolkit of theory The book is modular in design allowing the reader to pick and choose a selection of chapters if necessary It can be used alone or in conjunction with the accompanying two volumes covering stars and stellar systems and galaxies and cosmology respectively After reviewing the basics of dynamics electromagnetic theory and statistical physics the book carefully develops a solid understanding of radiative processes spectra fluid mechanics plasma physics and MHD dynamics of gravitating systems general relativity nuclear physics and other key concepts Throughout the reader's understanding is developed and tested with problems and helpful hints This welcome volume provides graduate students with an indispensable introduction to and reference on all the physical processes they will need to successfully tackle research in astrophysics and cosmology
