Theoretical Acoustics Of Underwater Structures:

Theoretical Acoustics Of Underwater Structures J H James, Elizabeth A Skelton, 1997-12-18 This important book provides an account of the linear acoustics of basic isotropic anisotropic structures excited by time harmonic and transient mechanical forces and acoustic sources Many numerical examples are given to aid physical insight and to provide benchmark computations of sound radiation and sound scattering The theoretical methods developed originally for naval noise control problems should find civil application in the acoustic modelling of structures fabricated from both fibre reinforced and isotropic materials Such an endeavour is increasingly desirable and necessary in this noisy world
