**Theory of Colours** Johann Wolfgang von Goethe, 2015-07-19 Theory of Colours is a book by Johann Wolfgang von Goethe about the poet's views on the nature of colours and how these are perceived by humans. Published in 1810, it contains detailed descriptions of phenomena such as coloured shadows, refraction, and chromatic aberration. The work originated in Goethe's occupation with painting and mainly exerted an influence onto the arts: Philipp Otto Runge, J. M. W. Turner, the Pre-Raphaelites, Wassily Kandinsky. Although Goethe's work was rejected by physicists, a number of philosophers and physicists have concerned themselves with it, including Thomas Johann Seebeck, Arthur Schopenhauer (see *On Vision and Colors*), Hermann von Helmholtz, Rudolf Steiner, Ludwig Wittgenstein, Werner Heisenberg, Kurt Gödel, and Mitchell Feigenbaum. Goethe's book provides a catalogue of how colour is perceived in a wide variety of circumstances and considers Isaac Newton's observations to be special cases. Unlike Newton, Goethe's concern was not so much with the analytic treatment of colour as with the qualities of how phenomena are perceived. Philosophers have come to understand the distinction between the optical spectrum as observed by Newton and the phenomenon of human colour perception as presented by Goethe, a subject analyzed at length by Wittgenstein in his exegesis of Goethe in *Remarks on Colour*.

Goethe's Theory of Colours Johann Wolfgang von Goethe, 1840. This work by Johann Wolfgang von Goethe (1749–1832) was translated into English in 1840 by Sir Charles Eastlake (1793–1865), painter and later keeper of the National Gallery. Goethe's 1810 work was rejected by many contemporary scientists because it appeared to contradict the physical laws laid down by Newton. However, its focus on the human perception of the colour spectrum as opposed to the observable optical phenomenon was attractive to and influential upon artists and philosophers. As Eastlake says in his preface, the work's dismissal on scientific grounds had caused a well-arranged mass of observations and experiments, many of which are important and interesting to be overlooked. Eastlake also puts Goethe's work into its aesthetic and scientific context and describes its original reception. His clear translation of Goethe's observations and experiments on colour and light will appeal to anyone interested in our responses to art.

Color Theory Aaron Fine, 2021-08-12 Giving an overview of the history of color theory from ancient and classical cultures to contemporary contexts, this book explores important critical principles and provides practical guidance on the use of color in art and design. Going beyond a simple recitation of what has historically been said about color, artist and educator Aaron Fine provides an intellectual history, critiquing prevailing Western ideas on the subject and challenging assumptions. He analyses colonialist and gendered attitudes, materialist and romanticist perspectives, spiritualist approaches to color, color in the age of

reproduction and modernist and post modernist color strategies Highlighted throughout are examples of the ways in which attitudes towards color have been impacted by the legacy of colonialism and are tied up with race gender and class Topics covered include color models wheels and charts color interaction and theories of perception with over 150 images throughout By placing under examined tenets of color theory such as the color wheel and color primaries within the Western industrial context that generated them Fine helps you to connect color choices to color meanings and apply theory to practice
