

What's Binocular Vision

- ▶ In normal vision, both eyes are precisely aligned on an object of regard, so the images from that object fall on the fovea of each eye. Precise image formed on corresponding retinal areas of each eye permits cortical processing, which results in the merging or fusion of the two images. This process is termed binocular fusion

Theory Of Binocular Vision:

The Theory of Binocular Vision Ewald Hering, 2012-12-06 The Theory of Binocular Vision is a book about neurological control theory. In this sense it was far ahead of its time for the formal development of control theory was many decades in the future when this book appeared in 1868. Hering's principal concept is that the control of eye movements is greatly simplified if there is only one neurological control system commanding the double eye as a single organ. This idea leads directly to the first thorough exposition of what is now known as Hering's law that the corresponding muscles of the two eyes are always equally innervated. As Hering eloquently states it one and the same impulse of will directs both eyes simultaneously as one can direct a pair of horses with single reins. Ch 2 The 19th Century The book was written during an exciting era for physiological research. Before the mid 19th century the study of physiology had been limited to isolated efforts by great men who worked largely without colleagues or organized laboratories. Now for the first time of inquiry with many sensory physiology was becoming a living field groups working simultaneously on fundamental problems. Like the classical Greeks before them in philosophy the physiologists of the 19th century were defining in a burst of creative energy the problems. 1 2 Introduction which would shape subsequent inquiry and like the Greeks they produced a splendid period of science.

Normal Binocular Vision David Stidwill, Robert

Fletcher, 2017-09-25 Binocular vision i.e. where both eyes are used together is a fundamental component of human sight. It also aids hand-eye coordination and the perception of the self within the environment. Clinical anomalies pose a wide range of problems to the sufferer but normal binocular operation must first be understood before the eye specialist can assess and treat dysfunctions. This is a major new textbook for students of optometry, orthoptics and ophthalmology and also of psychology. Chapters span such key topics as binocular summation, fusion, the normal horopter, anatomy of the extraocular muscles, oculomotor control, binocular integration and depth perception. Fully illustrated throughout the book includes self-assessment exercises at the end of each chapter and sample experiments in binocular vision functioning.

Binocular Vision and Stereopsis Ian P. Howard, Brian J. Rogers, 1995 This book is a survey of knowledge about binocular vision with an emphasis on its role in the perception of a three-dimensional world. The primary interest is biological vision. In each chapter physiological, behavioral and computational approaches are reviewed in some detail, discussed and interrelated. The authors describe experiments required to answer specific questions and relate them to new terminologies and current theoretical schemes.

Foundations of

Binocular Vision: A Clinical Perspective Barbara A. Steinman, Ralph Philip Garzia, 2000-07-17 From a renowned author team comes a clinically oriented approach to the introductory study of binocular vision. Essential reading for second-year optometry students, this vital core text covers testing procedures, diagnostic issues and treatment modalities in preparation for more advanced clinical work. Key points to remember for national board exams are highlighted and discussions of clinical

applications and procedures abound in every chapter

Robotic Vision Guidance Theory and Technology Anhu Li, Xingsheng Liu, Zhaojun Deng, 2025-09-10 This book focuses on the basic theories and key technologies for robotic vision. The book features an in-depth demonstration of system parameter calibration, three-dimensional vision measurement, object pose estimation, tracking control strategies, and multi-sensor fusion methods, accompanied by robotic guidance solutions in various applications. The contributed work can help promote the development and application of robotic guidance for autonomous navigation, grasping, and manipulation tasks. Researchers and engineers in the field of robotic perception, visual measurement, and visual tracking can benefit from the book. The potential users include undergraduates and postgraduates majoring in intelligent manufacturing and artificial intelligence. The basis of English translation of this book originally in Chinese was facilitated by artificial intelligence. The content was later revised by the author for accuracy.
