Donald Norfolk, 2001-03-05 Gardening is one of today's most popular leisure pursuits yet is rarely seen as a holistic therapeutic practice that can enrich lives and fulfil spiritual needs This work attempts to redress this imbalance by exploring the history of horticulture and the ancient wisdom of poets and philosophers *Healing Gardens* Clare Cooper

Marcus, Marni Barnes, 1999-06-15 Although the healing qualities of nature have been recognized and relied on for centuries as a valuable part of convalescence recent history has seen nature's therapeutic role virtually eclipsed by the technological dominance of modern medicine As the twentieth century comes to a close and the medical community reacknowledges the importance of the environment to recovery the healing garden is emerging as a supplement to drug or technology based treatments *Healing Gardens* celebrates this renewed interest in nature as a catalyst for healing and renewal by examining the different therapeutic benefits of healing gardens and offering essential design guidance from experts in the field Unique and comprehensive *Healing Gardens* provides up to date coverage of research findings relevant design principles and approaches and best practice examples of different types of healing gardens It begins by exploring what current research reveals about the connection between nature human stress reduction and medical outcomes It then presents case studies and design guidelines for outdoor spaces in medical settings that include general psychiatric and children's hospitals as well as hospices nursing homes and Alzheimer's facilities Historical information literature reviews and studies on use are included for each type of outdoor space covered offering important insights into what works in healing gardens and what doesn't Generously supplemented with photographs site plans anecdotes and more *Healing Gardens* is an invaluable practical guide for landscape architects and others involved in creating and maintaining medical facilities and an extremely useful reference

for those responsible for patient care A unique and comprehensive look at the therapeutic effects and design of healing gardens For more and more people the shortest road to recovery is the one that leads through a healing garden Combining up to date information on the therapeutic benefits of healing gardens with practical design guidance from leading experts in the field Healing Gardens is an important resource for landscape architects and others working in this emerging area With the help of site plans photographs and more it presents design guidelines and case studies for outdoor spaces in a range of medical settings including Acute care general hospitals Psychiatric hospitals Children s hospitals Nursing homes Alzheimer s facilities Hospices

Gardens for the Future Guy Cooper, Gordon I. Taylor, 2000 The importance of the site whether ecological geological or historical is a significant influence on landscape architecture And three twentieth century garden designers Luis Barragan Isamu Noguchi and Roberto Burle Marx continue to inspire the evolution of contemporary landscape design Twenty case studies illustrating these themes accompanied by color photographs plans sketches and models comprise the second half of the book

BOOK JACKET Gardening as Therapy Margaret W. Walline, 1984 *Therapeutic Garden Design in Hospice Settings* Rose Melody Tapia, 2018 Gardens have been used as places for meditation relaxation and restoration through the ages From the earliest times gardens were used as sanctuaries and restorative places providing psychological spiritual emotional and physical health care delivery in Western Eastern and Asian societies In the late twentieth century Roger Ulrich s 1984 scientific investigations showed the tie between nature s positive effects on human health and the ability of patients to recover from surgery faster This and other scientific research gave rise to the creation of therapeutic gardens in healthcare facilities Today therapeutic gardens are designed to meet medical goals through activities known to improve human health e g walking socializing massage therapy etc The intent is to support the patient s recovery in the medical environment and to provide positive measurable results Gerlach Spriggs and Healy 2009 Conventional wisdom suggests that the most effective therapeutic gardens tend to be designed for a specific patient group and those surrounding the patient i e medical staff family members and care givers Specific activities can be designed into a therapeutic garden that match the standards of care and therapeutic outcomes defined for a patient group These may include walking physical therapy planting horticulture therapy smelling aroma therapy viewing flowers and plants chromotherapy cognitive therapy and all other therapeutic treatments aided by nature Since a therapeutic garden often targets the deficits of specific patient groups they oftentimes are not designed alike nor do they follow the same guidelines This project identifies tests the idea that therapeutic gardens should be designed for the primary patient population and or the secondary support personnel that care for a patient it uses a hospice garden to test whether this notion of unique design is appropriate within the broader specialty area of therapeutic garden design This professional paper is an exploratory study that examines the distinct benefits that a garden provides under hospice conditions Unlike more traditional therapeutic gardens the primary user group i e the patient quickly fades from the program elements leaving three distinct secondary populations to being served medical

staff family members and care givers Understanding the desired outcomes for these three populations helped the author broaden her knowledge and appreciation of the relationship between and among health care delivery therapeutic garden goals objectives and standard treatment protocols It is for this reason that this study attempted to define when standard therapeutic garden design protocols and goals are appropriate and when the designer must go to a broader set of goals and objectives that address the health and wellbeing of a secondary patient group i e those medical staff family and care giver who have been left behind This paper is organized into four parts a literature review methodology section data findings and a conclusions chapter The literature review section presents a general history of garden use in the treatment of patients and contemporary thoughts on gardens in health care delivery It also discusses current needs for therapeutic gardens in hospice care since hospice is the final stage in palliative care delivery The methodology chapter begins with a typical request for a design project with solution involving the Lake Superior Hospice Association and their property in Marquette MI At that time a preliminary set of plans were completed using the typical questions a designer would address with a client Among the questions to be addressed were what are the specific characteristic of this hospice what do we know about its users and their needs in terms of garden program To broaden out an understanding of hospice environments this preliminary set of plans were set aside to pursue a second and third phase of inquiry involving this evaluation of four other hospice facilities and their users in order to develop baseline data on the similarities and differences in hospices It allowed the author to define a broader base of personal professional and or therapeutic benefits a hospice garden might provide to its users it also identified other needs that hospices might have that were different from the Lake Superior case study The chapter on data findings summarizes the investigation into hospice similarities and differences and is applied to the Lake Superior Hospice LSH Association in Marquette MI in a final set of plans which can be found in the conclusions chapter The paper essentially involved studying the pre construction condition of a site with a narrow perspective on hospice garden design which was then followed by a broader investigation of hospice facilities operating elsewhere and using that data to suggest possible improvements i e a metaphoric post construction evaluation in the original design that serves the LSHA more appropriately This project will contribute to the advancement of landscape architecture as it continues its transition to an evidence based profession Findings from the case study and baseline data comparison was used to create a conceptual framework for decisions affecting garden design that serves patients patient advocates and hospice staff who deal with end of life circumstances The appropriateness of certain design elements under different hospice conditions structurally environmentally managerially and demographically must be taken into account This will provide better design outcomes that can be used to compare and analyze the decisions affecting therapeutic gardens in a hospice healthcare system
