Electricity Economics: Production Functions with Electricity Zhaoguang Hu,Zheng Hu,2013-11-22 Electricity Economics Production Functions with Electricity studies the production output from analyzing patterns of electricity consumption Since electricity data can be used to measure scenarios of economic performance due to its accuracy and reliability it could therefore also be used to help scholars explore new research frontiers that directly and indirectly benefits human society Our research initially explores a similar pattern to substitute the Cobb Douglas function with the production function with electricity to track and forecast economic activities The book systematically introduces the theoretical frameworks and mathematical models of economics from the perspective of electricity consumption The E GDP functions are presented for case studies of more than 20 developed and developing countries These functions also demonstrate substantial similarities between human DNA and production functions with electricity in terms of four major characteristics namely replication mutation uniqueness and evolution Furthermore the book includes extensive data and case studies on the U S China Japan etc It is intended for scientists engineers financial professionals policy makers consultants and anyone else with a desire to study electricity economics as well as related applications Dr Zhaoguang Hu is the vice president and chief energy specialist at the State Grid Energy Research Institute China Zheng Hu is a PhD candidate at the Center for Energy and Environmental Policy University of Delaware USA *Electricity*,1899 **Demand-Side Management and Electricity End-Use**

**Efficiency** A. de Almeida,Arthur H. Rosenfeld,2012-12-06 A NATO Advanced Study Institute on Demand Side Management and Electricity End Use Efficiency was held in order to present and to discuss some of the most recent developments in demand side electric power management and planning methodologies as well as research progress in relevant end use technologies Electricity is assuming an increasingly important role in buildings and industry due to its flexibility efficiency of conversion and cleanliness at the point of use However the production and transmission of electricity requires huge investments and may have undesirable environmental impacts The recent nuclear accident in Chernobyl and the damage caused by acid precipitation are creating increasing concerns about the impacts of power plants Some environmental problems are local or regional others such as global warming can affect the whole world Although environmental impacts may be minimized with additional investments electricity generation will become even more capital intensive Energy and electricity in particular is not directly consumed by people To achieve improved standards of living what is important is the level of production of goods and services If it is possible to produce the same quantity of goods and services with less electricity and in a cost effective way substantial benefits can be gained By reducing costs electricity efficiency can raise the standards of living and increase the competitiveness of an economy Electricity efficiency also leads to reduced requirements in power plant operation thus leading to reduced consumption of primary energy supplies and a higher quality environment
