Wastewater Treatment and Waste Management Vijay P. Singh, Ram Narayan Yadava, 2003

Innovative Water and Wastewater Treatment Technologies for the 21st Century G. H. Chen, 2000-05-31 The last third of the 20th century saw considerable development in water and wastewater treatment technologies particularly aerobic and anaerobic biological methods The objective of wastewater treatment also expanded from a traditional emphasis on BOD and SS removal to encompass nutrient and toxic chemical removal This is a consequence of the increasing public awareness of environmental problems and a strong desire for a clean environment to minimize any public health risk In the West secondary biological

processes have become standard for most waste treatment applications. However, this type of treatment can be too expensive to use in most developing and underdeveloped countries. Sometimes, as for a city like Hong Kong, there may not be sufficient land available for constructing a conventional secondary biological plant. There is thus an urgent need to develop innovative technologies that can be successfully adopted by different nations so that the global environment can be significantly improved at minimum cost. With this in mind, a symposium was organized to provide a forum for leading water and wastewater experts to exchange their visions, ideas, experiences, and accomplishments in the development of new technologies that can meet the challenge of the 21st century for the global environmental clean up. The 21 papers selected for these proceedings cover a wide range of topics from authoritative reviews of existing water and waste treatment technologies to the development of novel physical, chemical, and biological water and wastewater treatment methods. *Low Cost Water and Wastewater Treatment Systems: Conventional and Recent Advances* Xuan-Thanh Bui, Ashok Pandey, Thanh-Tin Nguyen, Shu-Yuan Pan, 2024-10-15. *Low Cost Water and Wastewater Treatment Systems: Conventional and Recent Advances* introduces different conventional and advanced low cost systems for water and wastewater treatment. The technologies involve conventional biological processes with low cost and newly developed processes for improving the performance of the treatment processes. The book also contains chapters describing some main topics which discuss their principles, development, and applications: 1. low cost biological treatment system, 2. bioremediation technologies, 3. natural based technologies, 4. biomediated technologies, 5. adsorption based technologies, 6. membrane filtration based technologies, and 7. emerging technologies. It investigates various low cost treatment technologies and applies these to the removal of organic matters, nutrients, and emerging micro pollutants in developing countries and worldwide. Provides up to date information on low cost biological treatment systems. Includes water and wastewater treatment and reuse by low cost membrane systems. Presents state of the art information on design and operation of biological low cost systems.
