Watch What I Do Programming By Demonstration:

Watch what I Do Allen Cypher, Daniel Conrad Halbert, 1993 Programming by Demonstration is a method that allows end users to create customize and extend programs by demonstrating what the program should do **Review of watch what I do** Ruven Brooks, 1993 **Imitation in Animals and Artifacts** Christopher L. Nehaniv, Kerstin Dautenhahn, 2002 An interdisciplinary overview of current research on imitation in animals and artifacts Human-Computer Interaction -- INTERACT 2011 Pedro Campos, Nicholas Graham, Joaquim Jorge, Nuno Nunes, Philippe Palanque, Marco Winckler, 2011-09-01 The four volume set LNCS 6946 6949 constitutes the refereed proceedings of the 13th IFIP TC13 International Conference on Human Computer Interaction INTERACT 2011 held in Lisbon Portugal in September 2011 The 47 papers included in the first volume are organized in topical sections on accessibility affective HCI computer mediated communication computer supported cooperative work evaluation finding and retrieving fun aesthetic design gestures and HCI in the classroom

Human-Computer Interaction Brad Blumenthal, Juri Gornostaev, Claus Unger, 1994-10-26 This volume presents the proceedings of the Fourth East West Conference on Human Computer Interaction EWHCI 94 held in St Petersburg Russia in August 1994 One of the main objectives of EWHCI is to foster professional and personal contacts between researchers in the former Soviet Union and researchers from the rest of the world The volume contains revised versions of the 20 best papers selected from the 37 papers accepted for presentation at the conference and covers three basic themes theoretical and empirical underpinnings of HCI implemented systems and the relationship of HCI to other fields The papers are organized in sections on foundations of HCI empirical studies and applications environments architectures learning and teaching and hypertext Human-Computer Interaction Steve Howard, Judy Hammond, Gitte Lindgaard, 2013-06-05 The theme of the 1997 INTERACT conference Discovering New Worlds of HCI signals major changes that are taking place with the expansion of new technologies into fresh areas of work and leisure throughout the world and new pervasive powerful systems based on multimedia and the internet HCI has a vital role to play in these new worlds to ensure that people using the new technologies are empowered rather than subjugated to the technology that they increasingly have to use In addition outcomes from HCI research studies over the past 20 years are now finding their way into many organisations and helping to improve and enhance work practices These factors have strongly influenced the INTERACT 97 Committee when creating the conference programme with the result that besides the more traditional HCI research and education focus found in previous INTERACT conferences one strand of the 1997 conference has been devoted to industry and another to multimedia The growth in the IFIP TC13 committee itself reflects the expansion of HCI into new worlds Membership of IFIP TC13 has risen to now include representatives of 24 IFIP member country societies from many parts of the world In 1997 IFIP TC13 breaks new ground by holding its sixth INTERACT conference in the Asia Pacific region This is a significant departure from previous INTERACT conferences that were all held in Europe and is especially important for the Asia Pacific region as HCI expands beyond its

traditional base *Studies in Conversational UX Design* Robert J. Moore, Margaret H. Szymanski, Raphael Arar, Guang-Jie Ren, 2018-09-03 As voice interfaces and virtual assistants have moved out of the industry research labs and into the pockets of desktops and living rooms of the general public a demand for a new kind of user experience UX design is emerging Although the people are becoming familiar with Siri Alexa Cortana and others their user experience is still characterized by short command or query oriented exchanges rather than longer conversational ones Limitations of the microphone and natural language processing technologies are only part of the problem Current conventions of UX design apply mostly to visual user interfaces such as web or mobile they are less useful for deciding how to organize utterances by the user and the virtual agent into sequences that work like those of natural human conversation This edited book explores the intersection of UX design of both text or voice based virtual agents and the analysis of naturally occurring human conversation e.g. the Conversation Analysis Discourse Analysis and Interactional Sociolinguistics literatures It contains contributions from researchers from academia and industry with varied backgrounds working in the area of human computer interaction Each chapter explores some aspect of conversational UX design Some describe the design challenges faced in creating a particular virtual agent Others discuss how the findings from the literatures of the social sciences can inform a new kind of UX design that starts with conversation

Artificial Intelligence in Design '98 John S. Gero, Fay Sudweeks, 2012-12-06 The development of computational models of design founded on the artificial intelligence paradigm has provided an impetus for much of current design research As artificial intelligence has matured and developed new approaches so the impact of these new approaches on design research has been felt This can be seen in the way concepts from cognitive science have found their way into artificial intelligence and hence into design research And also in the way in which agent based systems are being incorporated into design systems In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science Whereas a number of years ago the focus was largely on applying artificial intelligence to designing as an activity thus treating designing as a form of problem solving today we are seeing a much wider variety of conceptions of the role of artificial intelligence in helping to model and comprehend designing as a process Thus we see papers in this volume which have as their focus the development or implementation of frameworks for artificial intelligence in design attempting to determine a unique locus for these ideas We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm often the foundations come from cognitive studies of human designers
