[Communication Platform by Means of a Pattern and UML Based Software Development Process](#) Arnd Schnieders, 2003-09-29 Inhaltsangabe Abstract There are about 230 000 establishments in the Spanish hotel restaurant and catering industry accounting for a turnover of about 15 6 thousand million euros All of them sell food to private consumers On the other hand suppliers and traders supply the catering trade with food and beverage products Usually the different players in this food distribution network trade products by means of orders which are placed manually This is a process which can be enhanced through the application of computer and Internet technology A project lately also supported by the Spanish government is supposed to fill this gap This project is called Catanet and has been established three years ago Actually the Catanet platform is used by more than 100 customers amongst them very important industry players like Lauren Films Pepsi Unilever and

Nestle Some of them will carry out a significant part of their overall food orders by the Catanet platform which corresponds to a turnover volume of many million euros In the former version of the Catanet platform clients had to apply a web page based interface in order to use the Catanet services As this approach prohibited the full exploitation of the benefits the use of computer assistance provides e g human participation still constitutes an inevitable and crucial part of the transaction the interaction is completely asynchronous an additional level is being added to the Catanet platform eliminating these shortcomings During the time of this work the number of Catanet customers has grown explosively increasing also the diversity of the customer s computer systems Additionally new subprojects could be launched due to the acquisition of a government grant These encompassed among others new value added services demanded by the customers like an instant messaging module and a module for the automatic update of the local product catalogue The characteristics of the IT infrastructure of the new customers which will carry out transactions with a serious turnover via the Catanet platform and the necessity to integrate the new subprojects required an adaptation of the design of the platform prototype which had been developed by this time and which is described in this work Within this context the decision has been done to use NET Framework based programs on the customer side instead of Java which had been used so far The reasons for this were besides the easier integration with the IT

**JavaTech, an Introduction to Scientific and Technical Computing with Java** Clark S. Lindsey,Johnny S. Tolliver,Thomas Lindblad,2005-10-13 JavaTech is a practical introduction to the Java programming language with an emphasis on the features that benefit technical computing After presenting the basics of object oriented programming in Java it examines introductory topics such as graphical interfaces and thread processes It goes on to review network programming and develops Web client server examples for tasks such as monitoring remote devices The focus then shifts to distributed computing with RMI Finally it examines how Java programs can access the local platform and interact with hardware Topics include combining native code with Java communication via serial lines and programming embedded processors An extensive web site supports the book with additional instructional materials JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications It will be used as a textbook for programming courses and by researchers who need to learn Java for a particular task

**Rule Based Integration of Web Services Into Semantic Data Bases** Jochen Gruber,2007-08 Master s Thesis from the year 2006 in the subject Computer Science Internet New Technologies grade 1 1 University of Hagen Institut f r Informatik language English abstract Details of a semantic annotation are outlined both for the semantic model consisting of concepts to model the area of discourse as well as the individual model for a single service The annotation is used to build a concrete implementation of a generic processing framework translating the annotation of a service into rules to be integrated into an OWL knowledge base rule engine The realization is done for the Jena Semantic Web Framework an open source library for Semantic Web application for the Java language The realization is designed as an add on to Jena which integrates

service calls in such a way that service invocation is transparent to applications building on Jena A discussion on optimizations both implemented ones and realizable but not implemented ones is included They can serve as starting points for moving the implementation from a proof of concept status to real world usability The section finishes with some considerations on general run time behavior Finally the presented framework is evaluated in more detail Firstly a sophisticated scenario for the running example is described and shown how automated service selection composition and invocation is actually realized during run time Then the approach is evaluated with regard to services with more complex parameterizations with particular focus on the data supplied to the services and the rules generated from such complex parameterized services and whether such rules are still usable The prime design rationale of the presented framework implementation is as a proof of concept for the approach of generically integrating Web Services as rules with Semantic knowledge bases Therefore there is still a long way to go for a real world application to be build on the framework At several points notes are added
