[Solving Problems in Scientific Computing Using MAPLE and MATLAB](#) Walter Gander, Jiří Hřebíček, 1993 Modern computing tools like Maple symbolic computation and Matlab a numeric computation and visualization program make it possible to easily solve realistic nontrivial problems in scientific computing In education traditionally complicated problems were avoided since the amount of work for obtaining the solutions was not feasible for the students This situation has changed now and the students can be taught real life problems that they can actually solve using the new powerful software The reader will improve his knowledge through learning by examples and he will learn how both systems MATLAB and MAPLE may be used to solve problems interactively in an elegant way Readers will learn to solve similar problems by understanding and applying the techniques presented in the book All programs used in the book are available to the reader in electronic form

Scientific Computing - An Introduction using Maple and MATLAB Walter Gander, Martin J.

Gander, Felix Kwok, 2014-04-23 Scientific computing is the study of how to use computers effectively to solve problems that arise from the mathematical modeling of phenomena in science and engineering It is based on mathematics numerical and symbolic algebraic computations and visualization This book serves as an introduction to both the theory and practice of scientific computing with each chapter presenting the basic algorithms that serve as the workhorses of many scientific codes we explain both the theory behind these algorithms and how they must be implemented in order to work reliably in finite precision arithmetic The book includes many programs written in Matlab and Maple Maple is often used to derive numerical algorithms whereas Matlab is used to implement them The theory is developed in such a way that students can learn by themselves as they work through the text Each chapter contains numerous examples and problems to help readers understand the material hands on **Numerical Methods in Scientific Computing:** Germund Dahlquist, Ake Bjorck, 2008-09-04 This work addresses the increasingly important role of numerical methods in science and engineering It combines traditional and well developed topics with other material such as interval arithmetic elementary functions operator series convergence acceleration and continued fractions *Scientific Computing* Michael T. Heath, 2018-11-14 This book differs from traditional numerical analysis texts in that it focuses on the motivation and ideas behind the algorithms presented rather than on detailed analyses of them It presents a broad overview of methods and software for solving mathematical problems arising in computational modeling and data analysis including proper problem formulation selection of effective solution algorithms and interpretation of results In the 20 years since its original publication the modern fundamental perspective of this book has aged well and it continues to be used in the classroom This Classics edition has been updated to include pointers to Python software and the Chebfun package expansions on barycentric formulation for Lagrange polynomial interpretation and stochastic methods and the availability of about 100 interactive educational modules that dynamically illustrate the concepts and algorithms in the book *Scientific Computing An Introductory Survey* Second Edition is intended as both a textbook and a reference for computationally oriented disciplines that need to solve mathematical problems **Mathematics Galore!** Christopher J. Budd, Christopher Sangwin, 2001-05-17 This book is a series of self contained workshops in mathematics which aim to enthuse and inspire young people their parents and teachers with the joy and excitement of modern mathematics Written in an informal style each chapter describes how novel mathematical ideas relate directly to real life The chapters contain both a description of the mathematics and its applications together with problem sheets their solutions and ideas for further work project and field trips Topics include mazes folk dancing sundials magic castles codes number systems and slide rules This book should be accessible to young people from age thirteen upwards and yet contains material which should stretch the brightest students **Scientific Computing with MATLAB** Dingyu Xue, YangQuan Chen, 2018-09-03 *Scientific Computing with MATLAB* Second Edition improves students ability to tackle mathematical problems It helps students understand the mathematical background and find reliable and

accurate solutions to mathematical problems with the use of MATLAB avoiding the tedious and complex technical details of mathematics This edition retains the structure of its predecessor while expanding and updating the content of each chapter The book bridges the gap between problems and solutions through well grouped topics and clear MATLAB example scripts and reproducible MATLAB generated plots Students can effortlessly experiment with the scripts for a deep hands on exploration Each chapter also includes a set of problems to strengthen understanding of the material
