Unwelcome Invader Angela Devine, 1995 **Biological Invasions** M. Williamson, 1996 Some biological invasions have marked ecological and economic effects But most fail and most of those that succeed have small effects This volume should be of interest to plant ecologists plant conservationists population biologists agriculturalists **Biological Invasions** David Pimentel PhD, 2011-05-23 The impact of invasive species is second only to that of human population growth and associated activities as a cause of the loss of biodiversity throughout the world In the United States invasions of nonnative plants animals or microbes cause major environmental damage The second edition of *Biological Invasions Economic and Environmental Costs* *Biological Invasions in New Zealand* Robert B. Allen, William G. Lee, 2006-07-04 Man's recent colonization of New Zealand has dramatically altered the resident biota and resulted in the introduction of numerous alien organisms to these once remote islands In reverse there is increasing evidence of a lesser known export of species to other regions of the world This volume presents an in depth review of the level and rate of such invasions and investigates what controls the success of invaders and the consequences for ecosystems both on land and offshore It provides invasion biologists everywhere with tests of current theories about those factors leading to the success of invaders as well as evaluating principles for understanding the nature of their impacts that form a solid basis for the effective management of biological invasions worldwide *Biological Invasions* Ph.D., David Pimentel, 2002-06-13 Bioinvasion is fast becoming one of the world's most costly ecological problems as it disrupts agriculture drastically alters ecosystems spreads disease and interferes with shipping The economic and environmental damages from alien plant animals and microbes in the United States British Isles Australia South Africa India and Brazil *Unwelcome Invader* Devine, Angela, 1998 **A Handbook of Global Freshwater Invasive Species** Robert A. Francis, 2012-03-12 Invasive non native species are a major threat to global biodiversity Often introduced accidentally through international travel or trade they invade and colonize new habitats often with devastating consequences for the local flora and fauna Their environmental impacts can range from damage to resource production e.g agriculture and forestry and infrastructure e.g buildings road and water supply to human health They consequently can have major economic impacts It is a priority to prevent their introduction and spread as well as to control them Freshwater ecosystems are particularly at risk from invasions and are landscape corridors that facilitate the spread of invasives This book reviews the current state of knowledge of the most notable global invasive freshwater species or groups based on their severity of economic impact geographic distribution outside of their native range extent of research and recognition of the ecological severity of the impact of the species by the IUCN As well as some of the very well known species the book also covers some invasives that are emerging as serious threats Examples covered include a range of aquatic and riparian plants insects molluscs crustacea fish amphibians reptiles and mammals as well as some major pathogens of aquatic organisms The book also includes overview chapters synthesizing the ecological impact of invasive

species in fresh water and summarizing practical implications for the management of rivers and other freshwater habitats
