Greibach,1975 **Topics in the Theory of Computation** M. Karpinski,J. van Leeuwen,1985-01-01 This volume contains nine selected papers presented at the Borgholm conference They were chosen on the basis of their immediate relevance to the most fundamental aspects of the theory of computation and the newest developments in this area These papers which have been extended and refereed fall into eight categories 1 Constructive Mathematics in Models of Computation and Programming 2 Abstract Calculi and Denotational Semantics 3 Theory of Machines Computations and Languages 4 Nondeterminism Concurrency and Distributed Computing 5 Abstract Algebras Logics and Combinatorics in Computation Theory 6 General Computability and Decidability 7 Computational and Arithmetic Complexity 8 Analysis of Algorithms and Feasible Computing **Gödel's Disjunction** Leon Horsten,Philip Welch,2016-09-09 The logician Kurt G del in 1951 established a disjunctive thesis about the scope and limits of mathematical knowledge either the mathematical mind is not equivalent to a Turing machine i e a computer or there are absolutely undecidable mathematical problems In the second half of the twentieth century attempts have been made to arrive at a stronger conclusion In particular arguments have been produced by the philosopher J R Lucas and by the physicist and mathematician Roger Penrose that intend to show that the mathematical mind is more powerful than any computer These arguments and counterarguments to them have not convinced the logical and philosophical community The reason for this is an insufficiency if rigour in the debate The contributions in this volume move the debate forward by formulating rigorous frameworks and formally spelling out and evaluating arguments that bear on G del s disjunction in these frameworks The contributions in this volume have been written by world leading experts in the field **Fundamentals of Computation Theory** F.
