Systematic Learning Strategies:

Systematic Learning Strategies Tony Morrow, 2001-07-01 Learning Strategies Harold F. O'Neil, 2014-05-10
Learning Strategies describes a program of research in learning strategies initiated by the Defense Advanced Research Projects Agency DARPA in 1976. The goal of the program is to improve learning, decrease training time, and reduce training costs by developing and evaluating instructional materials designed to teach basic intellectual and affective skills. This book records the program's progress and suggests further avenues for research. Comprised of eight chapters, this book begins with an overview of the theoretical underpinnings of the teaching and learning approaches to the improvement of education, followed by a discussion on DARPA's preliminary work on an empirically based learning strategy training program, as well as its efforts to expand and modify the program. In order to provide an intellectual foundation for this program, several fields are surveyed for potential learning strategies: namely, cognitive psychology, artificial intelligence, behavioral modification, and motor learning. An instructional systems development approach for learning strategies is also proposed. The final chapter deals with models of evaluation extant in education and training and discusses the specific application of transactional evaluation to the DARPA Learning Strategies Research Program. This monograph should be of interest to students, teachers, and educational psychologists.

Learning Strategies for Sustainable Organisations Bryan Hopkins, 2022-05-04
Learning Strategies for Sustainable Organisations explores sustainability in the context of organisational practice and its implications for learning. Based on a systems thinking approach, it provides a thorough grounding in the principles of systems thinking and tools that can be used to help implement sustainability-focused learning strategies. Increasingly, organisations are recognising the importance of adapting their practices to become more sustainable. Drawing on the Agenda 2030 Sustainable Development Goals as a framework, new knowledge, skills, and attitudes are required to help provide products and services that align with changing social and ecological environments and better serve the communities of which they are a part. This book is a practical guide showing how to facilitate sustainability learning and development within organisations, explaining how to identify gaps in current practice, take into account different contexts and perspectives about what sustainability means, and evaluate results following implementation. Learning resources include chapter summaries, illustrations, reflection points, mind maps, and further reading. Written by an independent performance and learning consultant with extensive experience working with international organisations, this book provides a necessary toolkit for human resource development directors, training managers, chief sustainability officers, and management consultants specialising in sustainable development.
