Pre-Milestone A and Early-Phase Systems Engineering National Research Council, Division on Engineering and Physical Sciences, Air Force Studies Board, Committee on Pre-Milestone A Systems Engineering: A Retrospective Review and Benefits for Future Air Force Systems Acquisition, 2008-03-11 The ability of U S military forces to field new weapons systems quickly and to contain their cost growth has declined significantly over the past few decades There are many causes including increased complexity funding instability bureaucracy and more diverse user demands but a view that is gaining more acceptance is that better systems engineering SE could help shorten development time To investigate this assertion in more detail the US Air Force asked the NRC to examine the role that SE can play during the acquisition life cycle to address root causes of program failure especially during pre milestone A and early program phases This book presents an assessment of the relationship between SE and program outcome an examination of the SE workforce and an analysis of SE functions and guidelines The latter includes a definition of the minimum set of SE processes that need to be accounted for during project development

Dependable Software Systems Engineering Alexander Pretschner, D. Peled, T. Hutzelmann, 2017 Cyber physical systems closely combine and coordinate subsystems consisting of both computational and physical elements Such systems have become indispensable in the fields of aerospace automotive and the

automation industries as well as in consumer appliances Safety security and reliability are all essential elements of the trustworthiness of these modern cyber physical systems Protecting the data within such systems from external attack security and protecting the environment from any potential malfunction or misuse of these systems safety are subjects traditionally considered separately but a closer look reveals that techniques for the construction and analysis of the software based systems used in both security and safety are not necessarily fundamentally different This book presents papers from the 2016 Marktoberdorf summer school on software engineering held in Marktoberdorf Germany in August 2016 As its title Dependable Software Systems Engineering suggests the lectures at this summer school explored various aspects of the engineering of more dependable software systems and the 10 lectures included here cover subjects from programming languages and formal analysis tools to verification validation and assurance The book will be of interest to all those whose work involves the development and testing of more reliable and secure software systems

Requirements Targeting Software and Systems Engineering Manfred Broy, Bernhard Rumpe, 1998-11-04 Software engineering research has different profiles in Europe and North America While in North America there is a lot of know how in the practical technical and organizational aspects of software engineering in Europe the work concentrates more on foundations and formal modeling of software engineering issues Both approaches have their individual strengths and weaknesses Research driven solely by practice in software engineering runs in the danger of developing into a shallow field failing to find a solid scientific basis or to contribute substantially to the progress in software engineering Work concentrating on formal aspects alone is in the danger of becoming too theoretical and isolated from practice so that any transfer into practical application will fail Substantial progress in software engineering can be achieved however by bringing together pragmatic and foundational work in software engineering research This can provide a step towards a common scientific basis for software engineering that allows us to integrate the various research results leading to fruitful synergetic effects It will also help to identify critical research paths and to develop an adequate paradigm for the scientific discipline of software engineering In software and systems engineering it is necessary to distinguish the enormous difference between the dynamics in development we refer to and the limited scope assumed by many of today's software managers who still use outdated techniques Many of the unsolved problems associated with the old techniques are symptoms of a lack of formalization and a lack of automation support It was the goal of this workshop to bring together experts from science and practice in software and systems engineering from North America and Europe
