Tailormade Polymers:

Modification of Polymer Properties Carlos Federico Jasso-Gastinel, José M. Kenny, 2016-09-14 *Modification of Polymer Properties* provides for the first time in one title the latest information on gradient IPNs and gradient copolymers. The book covers the broad range of polymer modification routes in a fresh current view representing a timely addition to the technical literature of this important area. Historically blends copolymers or filled polymers have been developed to meet specific properties or to optimize the cost properties relationship. Using the gradient structure approach with conventional radical polymerization it has been shown that it is possible to optimize properties if appropriate gradients in the composition of copolymer chains are obtained. An overview of the gradient structure approach for designing polymers has not appeared in the recent literature and this title covers the different methods used to modify properties offering the whole range of ways to modify polymers in just one volume and making this an attractive option for a wide audience of practitioners. The approach for each chapter is to explain the fundamental principles of preparation cover properties modification describe future research and applications as examples of materials that may be prepared for specific applications or that are already in use in present day applications. The book is for readers that have a basic background in polymer science as well as those interested in the different ways to combine or modify polymer properties. Provides an integrated view on how to modify polymer properties. Presents the entire panorama of polymer properties modification in one reference covering the essential information in each topic. Includes the optimization of properties using gradients in polymers composition or structure.

Tailormade Polymers I. Meisel, C. S. Kniep, S. Spiegel, 2001-05-25 The national Symposium of the Division of Macromolecular Chemistry of the GDCh Gesellschaft Deutscher Chemiker in March 2000 was held in Merseburg with a topic of Tailormade Polymers. The scientific program was divided into two parts: contemporary activities in polymer synthesis and the tailoring of polymer properties by suitable modification steps. An excellent insight into contemporary activities in polymer synthesis, modification, and characterization was given. A selection of the contributions is presented in this volume.
