Geometric Hashing Fouad Sabry,2024-05-11 What is Geometric Hashing In computer science geometric hashing is a method for efficiently finding two dimensional objects represented by discrete points that have undergone an affine transformation though extensions exist to other object representations and transformations In an off line step the objects are encoded by treating each pair of points as a geometric basis The remaining points can be represented in an invariant fashion with respect to this basis using two parameters For each point its quantized transformed coordinates are stored in the hash table as a key and indices of the basis points as a value Then a new pair of basis points is selected and the process is repeated In the on line recognition step randomly selected pairs of data points are considered as candidate bases For each candidate basis the remaining data points are encoded according to the basis and possible correspondences from the object are found in the previously constructed table The candidate basis is accepted if a sufficiently large number of the data points index a consistent object basis How you will benefit I Insights and validations about the following topics Chapter 1 Geometric hashing Chapter 2 Analytic geometry Chapter 3 Cartesian coordinate system Chapter 4 2D computer graphics Chapter 5 Coordinate system Chapter 6 Translation geometry Chapter 7 Hough transform Chapter 8 Scale invariant feature transform

Chapter 9 Homography Chapter 10 Geometric feature learning II Answering the public top questions about geometric hashing III Real world examples for the usage of geometric hashing in many fields Who this book is for Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of Geometric Hashing

History of Computer Graphics Dan Ryan,2011-04-14 This book reflects the many changes that computer graphics technology has undergone in my working life time I graduated from a teachers college in 1963 There was not a computer of any kind on campus imagine my shock when my very first college employer Omaha University required me to know something about an IBM 1620 and a key punch machine The first part of this book is an account of that experience at Omaha University and later the Nebraska of Nebraska at Omaha When I moved to Clemson University in 1976 they had a computer and a large Calcomp Plotter but nothing else in the way of computer graphics hardware or software So except for a few short sections in chapter one this history begins with the events of 1963 and proceeds to document what happened to computer graphics for engineering design and manufacturing as practiced by an engineer or technician at Clemson University The next section of the book contains my experiences as a self employed consultant 1993 present my consulting started in 1984 after I completed a PhD in Data Systems Engineering In 1993 I left full time teaching and became Professor Emeritus at Clemson University I wanted to start my own consulting company DLR Associates Oddly enough most of my first consulting in computer graphics took place in the Omaha and Pennsylvania areas not South Carolina My contacts came from my paper presentations at various ASEE meetings and the annual national distance learning conferences held at the University of Maine I took a year off to accept a Fulbright Scholarship Nomination from the University of Rooker India I was listed as an international member in the Who's Who Directory of the computer graphics industry In a nut shell that is who I am Why then did I decide to write this book
