The Vascular Niche in Tissue Repair: A Therapeutic Target for Regeneration Francisco J. Rivera, Ludwig Aigner, 2018-03-13 Tissues and organs have although sometimes limited the capacity for endogenous repair which is aimed to re establish integrity and homeostasis Tissue repair involves pro and anti inflammatory processes new tissue formation and remodelling Depending on the local microenvironment tissue repair results either in scar tissue formation or in regeneration The latter aims to recapitulate the original tissue structure and architecture with the proper functionality Although some organisms such as planarians have a high regenerative capacity throughout the body in humans this property is more restricted to a few organs and tissues Regeneration in the adult is possible in particular through the existence of tissue resident pools of stem progenitor cells In response to tissue damage these cells are activated they proliferate and migrate and differentiate into mature cells Angiogenesis and neovascularization play a crucial role in tissue repair Besides providing with oxygen and nutrients angiogenesis generates a vascular niche VN consisting of different blood derived elements and endothelial cells surrounded by basement membrane as well as perivascular cells The newly generated VN communicates with the local stem progenitor cells and contributes to tissue repair For example platelets macrophages neutrophils perivascular cells and other VN components actively participate in the repair of skin bone muscle tendon brain spinal cord etc Despite these observations the exact role of the VN in tissue repair and the underlying mechanisms are still unclear and are awaiting further evidence that indeed will be required for the development of regenerative therapies for the treatment of traumatic injuries as well as degenerative diseases Bioengineering Mirjana Pavlovic, 2014-10-10 This book explores critical principles and new concepts in bioengineering integrating the biological physical and chemical laws and principles that provide a foundation for the field Both biological and engineering perspectives are included with key topics such as the physical chemical properties of cells tissues and organs principles of molecules composition and interplay in physiological scenarios and the complex physiological functions of heart neuronal cells muscle cells and tissues Chapters evaluate the

emerging fields of nanotechnology drug delivery concepts biomaterials and regenerative therapy The leading individuals and events are introduced along with their critical research Bioengineering A Conceptual Approach is a valuable resource for professionals or researchers interested in understanding the central elements of bioengineering Advanced level students in biomedical engineering and computer science will also find this book valuable as a secondary textbook or reference
