building a more inclusive society for those with visual impairments *The Eye and the Mind* C. Landesman,1993-10-31 This book is a discussion of some of the major philosophical problems centering around the topic of sense perception and the foundations of human knowledge It begins with a characterization of our common sense understanding of the role of the senses in the acquisition of belief and it argues that scientific accounts of the processes of perception undermine salient parts of this understanding The naive point of view of direct realism cannot be sustained in the light of a scientifically instructed understanding of perception This critique of direct realism points to the correctness of the representative theory of perception characteristic of such early modern philosophers as Descartes and Locke and it also endorses the subjectivism that they defended It argues that these positions do not require introducing sense data into the picture and thus it avoids the intractable problems that the sense datum philosophy introduces In addition several versions of cognitive accounts of sense perception are criticized with the result that it is unnecessary to characterize sensory processes in intentional terms The book then turns to a leading question introduced into modern philosophy by Descartes and Locke the question of the accuracy of the information delivered by the senses to our faculty of belief In particular how accurate are our representations of the secondary qualities The case of color is considered in detail Displacement of Concepts Donald A. Schon,2013-10-11 Tavistock Press was established as a cooperative venture between the Tavistock Institute and Routledge Kegan Paul RKP in the 1950s to produce a series of major contributions across the social sciences This volume is part of a 2001 reissue of a selection of those important works which have since gone out of print or are difficult to locate Published by Routledge 112 volumes in total are being brought together under the name The International Behavioural and Social Sciences Library Classics from the Tavistock Press Reproduced here in facsimile this volume was originally published in 1963 and is available individually The collection is also available in a number of themed mini sets of between 5 and 13 volumes or as a complete collection Lenses of Glass Elenor Croft,2026-03-15 For thousands of years a human's intellectual and economic value came with a strict biological expiration date The moment a scholar artisan or merchant hit their late forties presbyopia the natural loss of near vision rendered them effectively useless The wisdom of a lifetime was locked away the second the eyes failed Lenses of Glass uncovers the quiet monumental revolution triggered by the invention of spectacles in the 13th century This simple manipulation of curved glass shattered the biological ceiling of human productivity The book explores how this invisible optical technology doubled the working lifespan of Europe's brightest minds directly igniting the Renaissance by ensuring that master craftsmen and aging scholars could actually read write and invent for decades longer The narrative dives into the secretive guilds of Venetian glassmakers and the profound psychological shift of a society that suddenly realized biology could be corrected by engineering Readers will discover how the most transformative technologies are rarely the loudest This history offers a profound perspective on innovation proving that removing a single quiet bottleneck in human capability can exponentially accelerate the progress of an entire civilization **Perception** Tyler Burge,2022 Tyler Burge
