Submersible Technology: Adapting to Change Society for Underwater Technology (SUT), 1988-02-29. To maintain quality in research output providing the necessary new knowledge for our developing industries must be of prime importance to our community. This is an extremely difficult task when viewed in the context of the rapid rate of change being experienced within our national industrial scene. Collaborative research programmes designed to constantly monitor and improve the quality of output through regular reporting and assessment of achieved goals against defined targets can help the growth of our industry and benefit the rest of society. The government has established initiatives to encourage collaboration and the transfer of technology between the research and development domains. There are many signs that industry and the universities are making a concerted effort to adapt their working practices and relationships to meet the rapidly changing industrial environment. There are still many shortfalls and areas for improvement. Some of the extremes of government educational policy can and will seriously impair the evolution of and benefits gained from the collaboration initiatives. These must be resisted by academe and industry alike if we are to make new advances against foreign competition. Joint R and D projects do work and can be made to work. To achieve the steady growth of healthy and fruitful relationships they must however be given a good environment and a nourishing diet.

Subsea Control and Data Acquisition Society for Underwater Technology (SUT), 1990-03-31. The biennial conferences of the Society for Underwater Technology have achieved an excellent reputation for the quality of their presentations which cover topics of the most acute current interest as well as those at the forefront of review and development. The 1994 conference on Subsea Control and Data Acquisition formed no exception since it covers subjects at the cutting edge of modern technology. It is a matter of increasing concern that products are becoming overspecified resulting in excessive costs and longer development schedules while not conferring an equivalent benefit in reliability of the finished product. Subsea Control and Data Acquisition is vital reading for all subsea control system designers, manufacturers and operators, equipment consultants, application engineers, academics in the subsea engineering field and all subsea engineers.

Technology Society for Underwater Technology (SUT), 1985-03-31 Up to about 30 years ago diving activity was centred primarily on the naval services who provided a lead in the development of equipment techniques and procedures. Apart from one or two spectacular salvage undertakings the main commercial activity up until that time was fairly low key work in docks and harbours. The concept of saturation diving emerged from subsea habitats of which Captain Cousteau was one of the pioneers. This led the way to commercial development in support of exploration and the production of offshore oil and gas and I believe that my friend Henri Delauze was one of the first to mount the subsea habitat on deck and provide a sealed bell to convey divers from the habitat to the seabed without change of pressure. A remarkable feature of offshore oil and gas technology in the North Sea has been the willingness of all concerned to exchange information regarding R D. This has had a major effect on the advance in technology over the last few years. As far as diving is concerned it is to some extent Hobson's Choice. Legal patents are difficult to achieve in this field and the casual nature of diver employment to date has meant that ideas and techniques circulate almost as freely as the divers themselves. In addition the advertising of the new technologies which one has to offer almost automatically means disclosure of what otherwise might be secret.

The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and thrilling novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
