Mathematical reform is the driving force behind the organization and development of this new college algebra text

The use of technology primarily graphing utilities is assumed throughout the text

The development of each topic proceeds from the concrete to the abstract and takes full advantage of technology wherever appropriate

The first major objective of this book is to encourage students to investigate mathematical ideas and processes graphically and numerically as well as algebraically

Proceeding in this way students gain a broader deeper and more useful understanding of a concept or process

Even though concept development and technology are emphasized manipulative skills are not ignored and plenty of opportunities to practice basic skills are present

A brief look at the table of contents will reveal the importance of the function concept as a unifying theme

The second major objective of this book is the development of a library of elementary functions including their important properties and uses

Having this library of elementary functions as a basic working tool in their mathematical tool boxes students will be able to move into calculus with greater confidence and understanding

In addition a concise review of basic algebraic concepts is included in Appendix A for easy reference or systematic review

The third major objective of this book is to give the student substantial experience in solving and modeling real world problems

Enough applications are included to convince even the most skeptical student that mathematics is really useful

Most of the applications are simplified versions of actual real world problems taken from professional journals and professional books

No specialized experience is required to solve any of the applications
