

Notice that I left this blank. I don't fill it in until I am finished with the chapter.

Lecture Notes Oct 2 / 5

Questions

Textbook Notes

D. Measurement - Looking for some certain things.
Example: Student who is weighed on scale.

Monitor in Psychology Magazine

I titled this section "Questions" but I often write other misc things that I want to remember here. I think of it as a multi-purpose column

3. Possible limits of "free choice"
B. Science makes systematic observations

- 1. Reliability: consistency of a measure.
- 2. Validity: does a measure truly assess quality that it's claimed to measure? Truthfulness of a measure.

- Scientists' systematic observations include:
 - precise definitions of phenomena being observed
 - reliable + valid measuring tools that yield useful + interpretable data.
 - generally accepted method/obscure
 - System of logic for drawing conclusions and fitting those into general theories.

3. Accuracy: Agreement with a known standard (process of calibration).
Focus remains with these two because the 3rd will often be disputed.

I didn't hear the last name of someone the professor mentioned during lecture so I left a blank space. If I think the name is important I can fill it in later if its mentioned or I know what to ask the prof later on.

C. Science Produces Public Knowledge.
• An objective observation is someone who is completely objective (like Peirce thought). It just means something that can be verified by more than 1 observer.

E. Testable Questions - Can hypothesis/claim be falsified at least in principle (notion of falsifiability) by Carl

- Done through replication where someone redoes another's study and gets same results.
• Replication can only be done if they know precisely what was done. This is done by rules that are found in Publication Manual of APA.

F. Public Reporting: Many places they can publish.

Psychological Science (Peer Reviewed Journal)

S-13

When I take a break from reading, I like to leave a note to remind me where I left off.

• Introspection: a form of precise self-report.

- Peer Reviewed journals (most esteemed).
- Sci are proud and want to get it out
- Way yrs establish reputation
- We have to be aware of knowledge in order to advance and build on science.

- The problem w/ introspect is that its subjective and not verifiable.
- John B. Watson concluded that something can only be "scientific" if its directly observable and can be verified

I highlight key terms that I think might be important

• Watson felt behavior was the key for this. So he became the founder of behaviorism.

- Allows others to make their own judgment even if original peer review.

Now we observe behav instead of introspect.

D. Science produces Data-Based Conclusions -

• Allows sci to learn about findings and evaluate quality of

- Scientists are data-driven
- Conclusions about behav need to be supported by some evidence.

I failed to do this in my template, but its always a good idea to include your name and a way to contact you, so if your notes get lost they can be returned to you

If lost please return to: Jenna Shrewsbury jshrew@uw.edu

Take Note Of College Study Skills

Michael Brown

Take Note Of College Study Skills:

Getting the books **Take Note Of College Study Skills** now is not type of inspiring means. You could not isolated going in the manner of book store or library or borrowing from your links to gain access to them. This is an certainly simple means to specifically get lead by on-line.
