Steiner,1991-01-01 *Geofizicheskiĭ biŭlletin* ,2000 *Current Index to Statistics, Applications, Methods and Theory* ,1994 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields **Biometrics** ,1995 A Magyar Állami Földtani Intézet évi jelentése Magyar Állami Földtani Intézet,1992 **Acta Geodaetica Et Geophysica Hungarica** ,2002 Mathematical Reviews ,1999 **Introduction to Statistical Limit Theory** Alan M. Polansky,2011-01-07 Helping students develop a good understanding of asymptotic theory Introduction to Statistical Limit Theory provides a thorough yet accessible treatment of common modes of convergence and their related tools used in statistics It also discusses how the results can be applied to several common areas in the field The author explains as much of the *Optimum Methods in Statistics* Ferenc Steiner,1997 Practitioners of different disciplines often have a jungle of erroneous data which unfortunately contain only latently the necessary immediately usable information If a suitable model is chosen the E_i values calculated by the best model parameters are possibly near the primarily given x_i data which are the raw material of the statistics The optimum methods of statistics minimize the deviations on the basis of some principle that of the least squares has been generally used for two centuries but statistical procedures based on it work effectively only if the distribution type of the errors is Gaussian or near to it Since some years however global optimums can be economically calculated for whichever functions consequently the principle of minimum products and that of maximum reciprocals can also be used both resulting in most frequent value MFV procedures which are outlier resistant and their statistical efficiencies have high values in a wide range of error distribution types $i \in e$ they can extract the information effectively from the primarily given data The definition and characterization of new norms besides the old L_2 one is therefore unavoidable **Managing Matured Fields and Wells** István Lakatos,2005 According to a widely accepted forecast the world reserve of crude oil known and to be explored is about 360 Gt The global oil demand in the 21st century however will be roughly 250 260 Gt thus the recovery factor must be doubled from 30 35% at present to 65 70% on average to meet the predicted global demand Unfortunately more than 70% of the worldwide oil and gas production comes from depleted reservoirs Consequently revitalization of matured oil and gas fields have priority as part of the availability of

hydrocarbons Implementation of novel IOR EOR technologies and stimulation and optimization of well performance while minimizing the environmental impacts will form the main stream of developments in the coming years and decades Necessarily the R D activity will and must be strengthened in the future putting the oil and gas industry on a new pedestal This book demonstrates the recent contributions of research projects to oilfield chemistry and advanced production te
