Thinking Machines Luke Dormehl,2017-03-07 A fascinating look at Artificial Intelligence from its humble Cold War beginnings to the dazzling future that is just around the corner When most of us think about Artificial Intelligence our minds go straight to cyborgs robots and sci fi thrillers where machines take over the world But the truth is that Artificial Intelligence is already among us It exists in our smartphones fitness trackers and refrigerators that tell us when the milk will expire In some ways the future people dreamed of at the World s Fair in the 1960s is already here We re teaching our machines how to think like humans and they re learning at an incredible rate In *Thinking Machines* technology journalist Luke Dormehl takes you through the history of AI and how it makes up the foundations of the machines that think for us today Furthermore Dormehl speculates on the incredible and possibly terrifying future that s much closer than many would imagine This remarkable book will invite you to marvel at what now seems commonplace and to dream about a future in which the scope of humanity may need to broaden itself to include intelligent machines

Into the Heart of the Mind Frank Rose,1985 **The Creation of a Conscious Machine** Jean Tardy,2023-12-15 Describes seven novel variations of the Turing test Outlines an original definition of

consciousness described as implementable specifications Introduces the concept of Mathematics as a genetically transmissible cognitive medium This book presents a groundbreaking journey into the world of Generative AI technology and offers an in depth look at the prospect of AI achieving consciousness The book navigates through various historical and modern perspectives on AI from ancient myths to the Turing Test to the latest in technological advancements It covers the theoretical and practical aspects of creating a conscious AI including the specifications for synthetic consciousness and the integration of AI with human cognition The book questions whether generative AI can meet the traditional criteria of consciousness and how this might be realized

Principles of Artificial Intelligence Nils J. Nilsson, 2014-06-28 A classic introduction to artificial intelligence intended to bridge the gap between theory and practice Principles of Artificial Intelligence describes fundamental AI ideas that underlie applications such as natural language processing automatic programming robotics machine vision automatic theorem proving and intelligent data retrieval Rather than focusing on the subject matter of the applications the book is organized around general computational concepts involving the kinds of data structures used the types of operations performed on the data structures and the properties of the control strategies used Principles of Artificial Intelligence evolved from the author's courses and seminars at Stanford University and University of Massachusetts Amherst and is suitable for text use in a senior or graduate AI course or for individual study

Artificial Intelligence: A New Synthesis Nils J. Nilsson, 1998-04-17 Intelligent agents are employed as the central characters in this introductory text Beginning with elementary reactive agents Nilsson gradually increases their cognitive horsepower to illustrate the most important and lasting ideas in AI Neural networks genetic programming computer vision heuristic search knowledge representation and reasoning Bayes networks planning and language understanding are each revealed through the growing capabilities of these agents A distinguishing feature of this text is in its evolutionary approach to the study of AI This book provides a refreshing and motivating synthesis of the field by one of AI's master expositors and leading researchers An evolutionary approach provides a unifying theme Thorough coverage of important AI ideas old and new Frequent use of examples and illustrative diagrams Extensive coverage of machine learning methods throughout the text Citations to over 500 references Comprehensive index

AI and Human Thought and Emotion Sam Freed, 2019-07-11 The field of artificial intelligence AI has grown dramatically in recent decades from niche expert systems to the current myriad of deep machine learning applications that include personal assistants natural language interfaces and medical financial and traffic management systems This boom in AI engineering masks the fact that all current AI systems are based on two fundamental ideas mathematics logic and statistics from the 19th century and a grossly simplified understanding of biology mainly

neurons as understood in 1943 This book explores other fundamental ideas that have the potential to make AI more anthropomorphic Most books on AI are technical and do not consider the humanities Most books in the humanities treat technology in a similar manner AI and Human Thought and Emotion however is about AI how academics researchers scientists and practitioners came to think about AI the way they do and how they can think about it afresh with a humanities based perspective The book walks a middle line to share insights between the humanities and technology It starts with philosophy and the history of ideas and goes all the way to usable algorithms Central to this work are the concepts of introspection which is how consciousness is viewed and consciousness which is accessible to humans as they reflect on their own experience The main argument of this book is that AI based on introspection and emotion can produce more human like AI To discover the connections among emotion introspection and AI the book travels far from technology into the humanities and then returns with concrete examples of new algorithms At times philosophical historical and technical this exploration of human emotion and thinking poses questions and provides answers about the future of AI
