**Three-dimensional Chemical Structure Handling** Peter Willett,1991      **Three-dimensional chemical structure handling** Yvonne Connolly Martin,1990      **From Chemical Topology to Three-Dimensional Geometry** Alexandru T.

Balaban,1997-01-31 Even high speed supercomputers cannot easily convert traditional two dimensional databases from chemical topology into the three dimensional ones demanded by today s chemists particularly those working in drug design This fascinating volume resolves this problem by posing mathematical and topological models which greatly expand the capabilities of chemical graph theory The authors examine QSAR and molecular similarity studies the relationship between the sequence of amino acids and the less familiar secondary and tertiary protein structures and new topological methods

**Three-Dimensional Model Analysis and Processing** Faxin Yu,Zheming Lu,Hao Luo,Pinghui Wang,2011-02-03 With the increasing popularization of the Internet together with the rapid development of 3D scanning technologies and modeling tools 3D model databases have become more and more common in fields such as biology chemistry archaeology and geography People can distribute their own 3D works over the Internet search and download 3D model data and also carry out electronic trade over the Internet However some serious issues are related to this as follows 1 How to efficiently transmit and store huge 3D model data with limited bandwidth and storage capacity 2 How to prevent 3D works from being pirated and tampered with 3 How to search for the desired 3D models in huge multimedia databases This book is devoted to partially solving the above issues Compression is useful because it helps reduce the consumption of expensive resources such as hard disk space and transmission bandwidth On the downside compressed data must be decompressed to be used and this extra processing may be detrimental to some applications 3D polygonal mesh with geometry color normal vector and texture coordinate information as a common surface representation is now heavily used in various multimedia applications such as computer games animations and simulation applications To maintain a convincing level of realism many applications require highly detailed mesh models However such complex models demand broad network bandwidth and much storage capacity to transmit and store To address these problems 3D mesh compression is essential for reducing the size of 3D model

representation      Rational Drug Design Donald G. Truhlar,W. Jeffrey Howe,Anthony J. Hopfinger,Jeff Blaney,Richard E. Dammkoehler,2012-12-06 Drug research and discovery are of critical importance in human health care Computational approaches for drug lead discovery and optimization have proven successful in many recent research programs These methods have grown in their effectiveness not only because of improved understanding of the basic science the biological events and molecular interactions that define a target for therapeutic intervention but also because of advances in algorithms representations and mathematical procedures for studying such processes This volume surveys some of those advances A broad landscape of high profile topics in computer assisted molecular design CAMD directed to drug design are included Subject areas represented in the volume include receptor based applications such as binding energy approximations

molecular docking and de novo design non receptor based applications such as molecular similarity molecular dynamics simulations solvation and partitioning of a solute between aqueous and nonpolar media graph theory non linear multidimensional optimization processing of information obtained from simulation studies global optimization and search strategies and performance enhancement through parallel computing *Three-dimensional Chemical Structure Handling*, 1990 **Chemical Structures 2** Wendy A. Warr, 2012-12-06 This book constitutes the Proceedings of the second conference in the series Chemical Structures The International Language of Chemistry which was held at Leeuwenhorst Congress Centre Noordwijkerhout in the Netherlands between June 3 and June 7 1990 The conference was jointly sponsored by the Chemical Structure Association the American Chemical Society Division of Chemical Information the Royal Netherlands Chemical Society and the Chemical Information Groups of the Royal Society of Chemistry and the German Chemical Society The purpose of the conference was to bring together experts and an international professional audience to discuss and to further basic and applied research and development in the processing storage retrieval and use of chemical structures to focus international attention on the importance of chemical information and the vital research being carried out in chemical information science and to foster co operation among major chemical information organisations throughout the world Subjects covered included structure property correlations spectral database systems chemical nomenclature generic structures stereochemistry substructure search systems connection table formats ring perception information integration three dimensional substructure searching similarity searching and systems for handling chemical reaction information All the papers were peer reviewed or given by invited speakers Many internationally recognised teams in the field of chemical structure handling are represented in the chapters of this book **3D QSAR in Drug Design** Hugo Kubinyi, Gerd Folkers, Yvonne C. Martin, 1998-04-30 Volumes 2 and 3 of the 3D QSAR in Drug Design series aim to review the progress being made in CoMFA and other 3D QSAR approaches since the publication of the highly successful first volume about four years ago Volume 2 Ligand Protein Interactions and Molecular Similarity divides into three sections dealing with Ligand Protein Interactions Quantum Chemical Models and Molecular Dynamics Simulations and Pharmacophore Modelling and Molecular Similarity respectively Volume 3 Recent Advances is also divided into three sections namely 3D QSAR Methodology CoMFA and Related Approaches Receptor Models and Other 3D QSAR Approaches and 3D QSAR Applications More than seventy distinguished scientists have contributed nearly forty reviews of their work and related research to these two volumes which are of outstanding quality and timeliness These works present an up to date coverage of the latest developments in all fields of 3D QSAR [Reviews in Computational Chemistry, Volume 7](#) Kenny B. Lipkowitz, Donald B. Boyd, 2009-09-22 This is the seventh volume in the successful series designed to help the chemistry community keep current with the many new developments in computational techniques The writing style is refreshingly pedagogical and non mathematical allowing students and researchers access to computational methods outside their immediate area of expertise

Each invited author approaches a topic with the aim of helping the reader understand the material solve problems and locate key references quickly
