Free Public Transit Prince Jason Prince, 2019-10-15 Just like we don t pay to use elevators this book argues that we shouldn t pay to ride public transit In an age of increasing inequalities and ecological crisis movements advocating free public transit push us to rethink the status quo and consider urban transit as a fundamental human right Editors Jason Prince and Judith Dellheim have collected a panorama of case studies from around the world the United States Canada Estonia Greece France Italy Sweden Poland China Australia Brazil Mexico and more These movements are spread across the world and they aim to achieve two main outcomes ecological good and fair wealth distribution Free public transit coupled with increased capacity and improving service of public transit might well be the only viable strategy to eliminating car usage and achieving greenhouse gas targets in industrialized cities within a reasonable timeframe Movements for free mass transit also aim to see public transit treated as a public good like water and garbage service that should be paid for out of general tax revenues or a fairer regional tax strategy This book covers the rapidly changing transport options in cities today including bike and car share options Uber and Lyft and the imminent arrival of driver less vehicles The first English language book ever written on the subject Free Public Transit is a ground breaking book for those concerned about the future of our cities and an essential resource for those who make or try to change urban planning and transport policies

Rikisha to Rapid Transit Peter J. Rimmer, 2013-09-24 Rikisha to Rapid Transit Urban Public Transport Systems and Policy in Southeast Asia examines the historical development of urban public transport systems and policy in Southeast Asia The focus is on the passenger transport sector of the urban economy and the dilemmas facing decision makers with regard to the choice of technology and organization The prime target of the monograph is the

development studies field in which urban public transport has been a neglected topic The book is organized into three parts Part 1 assesses Western Japanese and overseas Chinese models and their relevance to decision making in Southeast Asia Part 2 examines the evolution of transport systems and policy in five capitals Singapore Bangkok Jakarta Manila and Kuala Lumpur and several provincial cities Penang Surabaya Davao City Chiang Mai Baguio and Metro Cebu Part 3 brings out the implications of this study for theory and practice The argument is structured in this way in order to preserve the historical sequence which will become progressively clearer as the study unfolds particularly as there is a very positive indication that the transport situation in cities results as much from historical development as from the interaction of forces currently at play

Motor Transport, 1924 **Transportation for Cities** Wilfred Owen, 1976 U S transportation policy long dedicated to promoting intercity transportation has been broadened in recent years to accommodate the needs of metropolitan areas Both urban highways and public transit have been receiving heavy emphasis and many miles of new subways are being built with federal aid during a nationwide resurgence of interest rail rapid transit While applauding the new directions in policy the author of this study stresses the need for more innovative applications of federal aid to cope with the closely related problems of transportation energy and the environment Decaying cities and sprawling suburbs he contends force a wasteful use of transportation mainly the automobile for escape from a worsening environment and as a means of bridging the increasing distance between the workplace housing shopping centers and other elements of urban life Thus mobility in the metropolis depends as much on a reordering of the environment as it does on improved transportation systems The design of these systems requires a careful consideration of priorities and alternatives the author cautions in order to avoid perpetuating obsolete methods at enormous cost His analysis of present policy and possible alternatives suggests that the time has come to link energy conservation and urban renewal programs with a program that combines federal aid and the the revision of transport management
