John Henderson Begg

Trust Management:

Investment Trust Organization and Management Leland Rex Robinson, 1929 **Trust, Complexity and Control** Piotr Cofta, 2007-10-15 An increasing reliance on the Internet and mobile communication has deprived us of our usual means of assessing another party's trustworthiness. This is increasingly forcing us to rely on control. Yet the notion of trust and trustworthiness is essential to the continued development of a technology-enabled society. *Trust, Complexity and Control* offers readers a single consistent explanation of how the sociological concept of trust can be applied to a broad spectrum of technology-related areas: convergent communication, automated agents, digital security, semantic web, artificial intelligence, e-commerce, e-government, privacy, etc. It presents a model of confidence in which trust and control are driven and limited by complexity in one explanatory framework and demonstrates how that framework can be applied to different research and application areas. Starting with the individual's assessment of trust, the book shows the reader how application of the framework can clarify misunderstandings and offer solutions to complex problems. The uniqueness of *Trust, Complexity and Control* is its interdisciplinary treatment of a variety of diverse areas using a single framework. Sections featured include Trust and distrust in the digital world, The impact of convergent communication and networks on trust, Trust economy and commerce, Trust enhancing technologies. *Trust, Complexity and Control* is an invaluable source of reference for both researchers and practitioners within the Trust community. It will also be of benefit to students and lecturers in the fields of information technology, social sciences, and computer engineering.

Special Trustee United States. Congress. Senate. Committee on Indian Affairs (1993-), 2003 Handbook of Information and Communication Security Peter Stavroulakis, Mark Stamp, 2010-02-23 At its core, information security deals with the secure and accurate transfer of information. While information security has long been important, it was perhaps brought more clearly into mainstream focus with the so-called Y2K issue. The Y2K scare was the fear that computer networks and the systems that are controlled or operated by software would fail with the turn of the millennium since their clocks could lose synchronization by not recognizing a number instruction with three zeros. A positive outcome of this scare was the creation of several Computer Emergency Response Teams (CERTs) around the world that now work operatively to exchange expertise and information and to coordinate in case major problems should arise in the modern IT environment. The terrorist attacks of 11 September 2001 raised security concerns to a new level. The international community responded on at least two fronts: one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists. As a sign of this new emphasis on security since 2001, all major academic publishers have started technical journals focused on security and every major communications conference, for example Globecom and ICC, has organized workshops and sessions on security issues. In addition, the IEEE has created a technical committee on Communication and Information Security. The first editor was intimately involved with security for the Athens Olympic Games of 2004. *Forthcoming Networks and Sustainability in the*

The potential for collaboration among various components has exceeded the current capabilities of traditional approaches to system integration and interoperability. As the world heads towards unlimited connectivity and global computing collaboration becomes one of the fundamental challenges for areas as diverse as eCommerce eGovernment eScience and the storage management and access of information through all the space and time dimensions. We view collaborative computing as the glue that brings the components together and also the lubricant that makes them work together. The conference and its community of researchers demonstrate the concrete progress we are making towards this vision. The conference would not have been successful without help from so many people.
