Ridpath Library of Universal Literature John Clark Ridpath,1906 *HCA Comics and Comic Art Auction Catalog #7021, Dallas, TX* Jim Steele,2010-04 **CX is broken** Jan Theon,2026-02-08 Customer Experience was built for a slower era The customer noticed friction formed an opinion and reported the problem Today digital products and platforms shape the path upstream algorithms decide what is visible what is possible and how quickly trust begins to erode By the time the customer finally complains the system has often already moved into its next state and the real loss has already happened far away from the dashboard CX is Broken Escaping the Simulation of Control argues that modern CX fails because organizations still treat it as a measurement and storytelling exercise not as a question of control and governance Dashboards describe outcomes but they do not tell you why the change started When an instrument measures narrative instead of mechanism it produces false certainty success is reported too optimistically and deterioration is detected too late often only when disengagement has already become practically irreversible This is not a do CX better handbook This is diagnostics The book helps you see where the system actually exerts control how the conditions of choice are constructed and why feedback always arrives late It shifts the focus from explaining customer journeys to system dynamics constraints and early signals the ones that appear before KPIs move When measurement serves control instead of replacing understanding leadership changes too decisions can be made while they still have impact The book breaks down in a practical way why traditional CX metrics NPS CSAT CES can create a false sense of safety and why improvement so often targets the wrong layer the dashboard gets fixed but the physics of the process remains unseen It shows how behavior is constrained before a choice even appears as a choice why churn

begins before feedback ever reaches reports and how to move from journey map thinking toward the language of system dynamics A special emphasis is on what governance looks like when algorithms build the experience upstream before an individual customer journey or feedback event even exists CX is Broken is for leaders product owners developers and strategists who need a reality based model of how experience is formed in algorithmic environments and how to move from the simulation of control back to a system that can actually be controlled It provides the language and structure to see system state delays and constraints so that control does not rely on after the fact explanations but on what can be measured and adjusted at the right timescale
