aircraft *Unmanned Aircraft Systems: Federal Actions Needed to Ensure Safety and Expand Their Potential Uses Within the National Airspace System*, 2008 Federal agencies such as DHS the Department of Commerce and NASA use UASs in many areas such as border security weather research and forest fire monitoring These agencies have plans to expand their UAS use in domestic airspace and local governments and commercial entities also have interest in using UASs Many factors support the potential for expanded use of UASs For example the nation s industrial base has expanded to support military operations and the number of trained UAS operators is increasing as personnel return from overseas duty Moreover some of the technology used in military UAS operations could be applied to civil uses DHS is expanding its use of UASs for border security and NASA is likely to continue using UASs to gather scientific data Additionally local law enforcement and firefighting agencies have expressed interest in using UASs to assist at crime scenes and wildfire locations and commercial users envision using UASs for tasks such as photographing real estate or inspecting pipelines According to an industry forecast the market for government and commercial use UASs could grow in the future The forecast also indicates that the United States could account for 73 percent of the world s research and development investment for UAS technology over the coming decade According to a UAS study and experts we surveyed UAS development could lead to technological advances that could benefit all national airspace users For example some experts we surveyed noted that improved collision avoidance technologies developed for UASs could lead to reduced aircraft separation requirements which could increase airspace capacity Additionally UASs could produce environmental benefits if they assume some missions currently performed by manned aircraft by using quieter engines that produce fewer emissions according to experts we surveyed

Unmanned Aircraft Design Mohammad H. Sadraey, 2024-09-07 This book provides fundamental principles design procedures and design tools for unmanned aerial vehicles UAVs with three sections focusing on vehicle design autopilot design and ground system design The design of manned aircraft and the design of UAVs have some similarities and some differences They include the design process constraints e g load pressurization and UAV main components autopilot ground station communications system sensors and payload A UAV designer must be aware of the latest UAV developments current technologies know lessons learned from past failures and they should appreciate the breadth of UAV design options The contribution of unmanned aircraft continues to expand every day and over 67 countries are developing and employing UAVs for both military and civil scientific purposes A UAV system is much more than a reusable air vehicle or vehicles UAVs are air vehicles they fly like airplanes and operate in an airplane environment They are designed like air vehicles they have to meet critical air vehicle requirements A designer needs to know how to integrate complex multi disciplinary systems and to understand the environment the requirements and the design challenges and this book is an excellent overview of the fundamentals from an engineering perspective This book is meant to meet the needs of newcomers into the world of UAVs The materials are intended to provide enough information in each area and illustrate how they all play together to support

the design of a complete UAV Therefore this book can be used both as a reference for engineers entering the field or as a supplementary text for a UAV design course to provide system level context for each specialized topic The second edition is extensively revised Some of the new terminologies concepts and specific unmanned aircraft systems are introduced The revisions make the book clearer and easier to understand and will add number of new subjects in areas that have become more prominent in the unmanned aviation world
