Slater, Omar Niamut, Xueni Pan, Lucio Lamberti, Anna Kobusinska, Piotr Skrzypczynski, Doron Friedman, Aurelio López-Tarruella Martínez, Matthias Quent, 2026-01-16 The metaverse is a large scale social environment based on the convergence of virtual and physical reality. Participants can take part in the metaverse through virtual augmented or mixed reality. They can carry out everyday activities together ranging from entertainment through to education, business, politics, health, or even legal proceedings. This may have a profound impact on the way we live, providing new beneficial ways of carrying out a multitude of activities, but may also introduce a multitude of problems that we cannot envisage. Mobile devices in conjunction with the world wide web and social media have led to revolutionary changes in society, including on the positive side deep connectivity between people, but on the other a potential threat to democracy. The immersive nature of the metaverse will potentially enhance both the positive and negative impact by an order of magnitude. The metaverse is an idea rather than a reality. There exist systems that offer nascent examples of a metaverse such as VRChat, Horizon Worlds, Decentraland, and others, but these are virtual environments that can be visited simultaneously by a multitude of participants who can see avatars of one another and interact together in limited ways. Such systems have been around since the 1990s, usually called collaborative virtual environments (CVEs). The modern versions introduce conceptually nothing new, except for their scale in implementation. Even the avatars often used today are hardly more elaborate than those that were used in the 1990s and early 2000s, although today we have the possibility of using personalized avatars of increasing quality. Therefore, the central problem to be addressed in this Research Topic is to foresee how a metaverse might actually go beyond the well known idea and implementations of CVEs. How will experiences in the metaverse be different from experiences in CVEs? What technology underpins the creation of such a metaverse? What applications are likely to emerge across a range of activities that are likely to be positive for humanity? What are the ethical, legal, and political implications, both positive and dangers? Primarily, what evidence can be offered to support the views or findings of the authors? This Research Topic is in conjunction with the conference A Metaverse for the Good, although submissions that were not initially presented at this conference are also welcome. Papers may be of any of the types afforded by Frontiers, although those that include empirical evidence for the arguments that they present will be prioritized. The themes of the Research Topic include the following, ideally including specific evidentiary examples: Metaverse as an agent for a more inclusive, responsible, and sustainable business and economic environment; The economic impact of the metaverse on companies, industries, and economies; The future of work, for example, whether working from home in immersive, real-time collaboration with others around the world, including with people physically present at the workplace, will be feasible; Are there examples of this today? New models for metaverse-based education: massive online physical and virtual classrooms that anyone can join from anywhere; The use of AI in the foundations, implementation, and applications in a metaverse; The impact of immersive experiences on the individuals in terms of learning, engagement, self-efficacy; Technical challenges including computer graphics, distributed and networked systems.

block chain human computer interaction Neurotechnology for example whether people will be able to interact in the metaverse through brain computer interfaces and the impact for people with physical disabilities Ethical regulatory and legal aspects ranging from ethical problems including the use of AI how the metaverse might be regulated The metaverse for medical and psychiatric treatment [Ethnographies of Reason](#) Eric Livingston,2017-05-15 Written by one of the most eminent scholars in the field Ethnographies of Reason is a unique book in terms of the studies it presents the perspective it develops and the research techniques it illustrates Using concrete case study materials throughout Eric Livingston offers a fundamentally different ethnographic approach to the study of skill and reasoning At the same time he addresses a much neglected topic in the literature illustrating practical techniques of ethnomethodological research and showing how such studies are actually conducted The book is a major contribution to ethnomethodology to social science methodology and to the study of skill and reasoning more generally **Origami for Kids** John Dover,Joel Kit,2020-02-09 Are you looking for a creative origami guide for children packed with activities designed to challenge kids minds and encourage creative thinking Inside Origami for Kids more than twenty easy to make projects with simple folding instructions 6 amazing games are provided for fascinating Animals Flowers Airplanes and more Fold lines are printed right on the illustrations to enable children aged 6 and more to easily create each origami all by themselves Children often become interested in origami but the diagrams and explanations meant for grown ups can sometimes be discouraging Enter Origami for Kids Over 30 fun to do projects Easy to follow instructions Simple and creative Origami games The 30 projects range from simple to slightly challenging perfect for all children of ages and skill levels from beginner to intermediate The beautiful designs are simple to create and fun to play with or display Origami for Kids is perfect for parents searching for interactive real world activities that challenge the mind and encourage creative experimentation Written by origami guru Joel Kit John Dover this comprehensive origami how to book for children makes this craft easy but more importantly fun Origami for kids is a great way to develop logical and spatial thinking encourage creative activity through the activation of thought processes
