Transgenic Cereal:

Omics Approach to Manage Abiotic Stress in Cereals Aryadeep Roychoudhury, Tariq Aftab, Krishnendu

Acharya, 2022-05-30 The edited book highlights various emerging Omics tools and techniques that are currently being used in the analysis of responses to different abiotic stress in agronomically important cereals and their applications in enhancing tolerance mechanism. Plants are severely challenged by diverse abiotic stress factors such as low water availability, drought, excess water, flooding, waterlogging, extremes of temperatures, cold, chilling, frost, and heat, salinity, mineral deficiency, and heavy metal toxicity. Agronomically important cereal crops like Rice, Wheat, Maize, Sorghum, Pearl Millet, Barley, Oats, Rye, Foxtail Millets, etc. that are the major sources of food material and nutritional components for human health are mostly exposed to abiotic stresses during the critical phases of flowering and grain yield. Different Omics platforms like genomics, transcriptomics, proteomics, metabolomics, and phenomics in conjunction with breeding and transgenic technology and high throughput technologies like next generation sequencing, epigenomics, genome editing, and CRISPR/Cas technology have emerged altogether in understanding abiotic stress response and strengthening defense and tolerance mechanism of different cereals. This book is beneficial to different universities and research institutes working with different cereal crops in the areas of stress physiology, stress associated genes and proteins, genomics, proteomics, genetic engineering, and other fields of molecular plant physiology. The book can also be used as an advanced textbook for the course work of research and master's level students. It will be of use to people involved in ecological studies and sustainable agriculture. The proposed book brings together the global leaders working on environmental stress in different cereal crops and motivates scientists to explore new horizons in the relevant areas of research.

Genomics of Cereal Crops Shabir Hussain Wani, Anuj Kumar, 2022-06-13 This

volume details different genomic methods and resources to explore cereal genomics. Chapters guide readers through crop genomes, Next Generation Sequencing (NGS) technologies, protocol for CRISPR editing, transgenic wheat, NGS approach, virus induced gene silencing (VIGS), genomic tools, computational prediction of ncRNAs, miRNAs, ceRNAs in cereal crops, genotyping by sequencing (GBS), Bayesian method, single cell sequencing, genome wide association study (GWAS), QTL interval mapping, whole genome bisulfite sequencing, genome imprinting, and methods for study the receptor-metabolite interaction.

Authoritative and cutting edge **Genomics of Cereal Crops** aims to be a useful and practical guide to new researchers and experts looking to expand their knowledge.

Improvement of Cereal Quality by Genetic Engineering R. Henry, J.A.

Ronalds, 2013-03-14 If I had to nominate an area of food production in which science has played a major role in addressing product quality to meet market needs, I would not pass by the intimate relationship of cereal chemistry with cereal plant breeding programs. In Australia, cereal chemistry and product quality labs have long been associated with wheat and barley breeding programs. Grain quality characteristics have been principal factors determining registration of new cultivars. This has not been without pain in Australia. On the one hand, some cultivars with promising yield and agronomic characteristics

have been rejected on the basis of quality characteristics and for a period our breeders imposed selection regimes based on yield which resulted in declining quality characteristics In the end the market provides the critical signals For many years Australia held a commanding market position on the basis of a single quality image initially based on bulked wheat of fair average quality FAQ Later this was improved by segregation into four broad classes based around Australian Standard White ASW This is no longer a viable marketing strategy We were probably a little slow in recognizing the mosaic of present day wheat markets but now have up to 18 different grades available Around the world wheat is a grain with many end uses Its use in bread is expanding

Cereal Biotechnology P C Morris, J H Bryce, 2000-07-26 Genetic modification is one of the most important and controversial issues facing the food industry nowhere more so than in cereal production and processing Cereals provide the cornerstone of the world's diet of which 50% comes from wheat maize and rice This major work explains the techniques involved and their enormous potential for food producers and consumers from cereal breeding to milling baking and brewing It also explains how this new technology is regulated the methods for assessing its potential risks and the ways that cereal biotechnology can add value from weed control and disease resistance to improved nutritional properties processing functionality and product quality in food processing Much has been written on this significant issue but until now there has been no guide for both those on the academic side and those working in the industry itself By examining both sides of the coin this book bridges the gap between these groups giving each a greater awareness of the other's role a more rounded picture of the business and an increased understanding of all the issues at stake Cereal Biotechnology is an authoritative reference for food processors on a key new technology an essential guide for biotechnologists on the range of commercial applications within cereals processing and a vital contribution to the debate for all those concerned with genetic modification in food processing A comprehensive account of the theory and practice of cereal biotechnology A detailed explanation of product development specific applications and current regulation An analysis of the potential added value benefit for both producers and consumers

Molecular improvement of cereal crops I. K. Vasil, 1999-03-31 From the prehistoric era to modern times cereal grains have been the most important source of human nutrition and have helped sustain the increasing population and the development of human civilization In order to meet the food needs of the 21st century food production must be doubled by the year 2025 and nearly tripled by 2050 Such enormous increases in food productivity cannot be brought about by relying entirely on conventional breeding methods especially on less land per capita with poor quality and quantity of water and under rapidly deteriorating environmental conditions Complementing and supplementing the breeding of major food crops such as the cereals which together account for 66% of the world food supply with molecular breeding and genetic manipulation may well provide a grace period of about 50 years in which to control population growth and achieve sustainable development In this volume leading world experts on cereal biotechnology describe the production

and commercialization of the first generation of transgenic cereals designed to substantially reduce or prevent the enormous losses to cereal productivity caused by competition with weeds and by various pests and pathogens which is an important first step in that direction

Evolution and Adaptation of Cereal Crops V. L. Chopra, Shyam Prakash, 2002 Aimed at the professional and postgraduate reader this text describes the evolution and adaptation of grain A pragmatic approach has been taken wherein adaptation has been traced for crop traits preferred by consumer demand and agro ecological requirements in the production areas

Induced Mutations and Molecular Techniques for Crop Improvement International Atomic Energy Agency, 1995 Proceedings of a symposium jointly organized by the IAEA and FAO Vienna 19-23 June 1995 The aim of the symposium was to review current aspects of mutation and molecular biology techniques for use in crop improvement and to bridge the gap between practical plant breeding and molecular techniques Problems of crop improvement worldwide and their possible solution were discussed It was concluded that use of all available approaches including mutation and molecular biology techniques will be crucial to future plant breeding programmes in order to meet the world's food production challenges
