   Unsolvable Classes of Quantificational Formulas Harry R. Lewis,1979    *Fundamentals of Computation Theory* F. Gecseg,1981-08    The Classical Decision Problem Egon Börger,Erich Grädel,Yuri Gurevich,2001-08-28 This book offers a comprehensive treatment of the classical decision problem of mathematical logic and of the role of the classical decision problem in modern computer science The text presents a revealing analysis of the natural order of decidable and undecidable cases and includes a number of simple proofs and exercises    **From Computational Logic to Computational Biology** Domenico Cantone,Alfredo Pulvirenti,2024-03-15 Alfredo Ferro s impact on information technology has traversed diverse domains encompassing Computational Logic Data Mining Bioinformatics and Complex Systems After first studying Mathematics at the University of Catania he received a Ph D in Computer Science from NYU in 1981 working under the supervision of Jacob Theodor Jack Schwartz He returned to the University of Catania where he established the Computer Science undergraduate program served as the coordinator of the Ph D program in Computer Science cofounded the Ph D program in Biology Human Genetics and Bioinformatics and retired as a full professor in 2021 Alfredo s academic career as a computer scientist is characterized by two distinct research phases Computational Logic until approximately 1995 followed by a notable focus on Data Mining and Bioinformatics The contributions in this volume reflect the quality and the scope of his personal and collaborative successes He also taught andinspired many excellent scientists A pioneering initiative was to establish summer schools for Ph D students in 1989 leading to the so called Lipari School now the J T Schwartz International School for Scientific Research where Alfredo continues to serve as director This prestigious series includes schools focused on Computer Science Complex Systems and Computational Biology featuring world class scientists as lecturers and mentors    **Ω-Bibliography of Mathematical Logic** Heinz-Dieter Ebbinghaus,2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI ProofTheory Constructive Mathematics J E Kister D van Dalen A S Troelstra    **Logic from Computer Science** Yiannis N. Moschovakis,2012-12-06 The volume is the outgrowth of a workshop with the same title held at MSRI in the week of

November 13 17 1989 and for those who did not get it Logic from Computer Science is the converse of Logic in Computer Science the full name of the highly successful annual LICS conferences We meant to have a conference which would bring together the LICS commu nity with some of the more traditional mathematical logicians and where the emphasis would be on the flow of ideas from computer science to logic rather than the other way around In a LICS talk sometimes the speaker presents a perfectly good theorem about say the A calculus or finite model theory in terms of its potential applications rather than its often more ob vious intrinsic foundational interest and intricate proof This is not meant to be a criticism the LICS meetings are after all organized by the IEEE Computer Society We thought for once it would be fun to see what we would get if we asked the speakers to emphasize the relevance of their work for logic rather than computer science and to point out what is involved in the proofs I think mostly it worked In any case the group of people represented as broad a selection of logicians as I have seen in recent years and the quality of the talks was in my view exceptionally unusually high I learned a lot and I think others did too **Combined Membership List of the American Mathematical Society and the Mathematical Association of America** American Mathematical Society,1979 Lists for 19 include the Mathematical Association of America and 1955 also the Society for Industrial and Applied Mathematics Metalogic Geoffrey Hunter,1973-06-26 This work makes available to readers without specialized training in mathematics complete proofs of the fundamental metatheorems of standard i e basically truth functional first order logic Included is a complete proof accessible to non mathematicians of the undecidability of first order logic the most important fact about logic to emerge from the work of the last half century Hunter explains concepts of mathematics and set theory along the way for the benefit of non mathematicians He also provides ample exercises with comprehensive answers Combined Membership List of the American Mathematical Society and the Mathematical Association of America American Mathematical Society,1979 Lists for 19 include the Mathematical Association of America and 1955 also the Society for Industrial and Applied Mathematics Notices of the American Mathematical Society American Mathematical Society,1979 **Wittgenstein in Florida** Jaakko Hintikka,2012-12-06 Most of the papers appearing in volume 87 numbers 1 2 are based on papers presented at the Colloquium on the Philosophy of Ludwig Wittgenstein held at the Department of Philosophy at Florida State University on 7 8 April 1989 We owe warm thanks to Florida State University for generously supporting this colloquium The English translation of the chapter entitled Philosophie from Wittgenstein s typescript number 213 von Wright appears here with permission of Wittgenstein s literary heirs without affecting existing copyrights The original German version of this chapter was edited by Heikki Nyman and appeared in Revue Internationale de Philosophie 43 1989 pp 175 203 Jaakko Hintikka s article 87 No 2 first appeared in a shorter form in The Times Literary Supplement No 4565 28 September to 4 October 1990 p 1030 The present version appears with the permis sion of The Times Literary Supplement which is gratefully acknowl edged Our thanks are due to all the participants of the colloquium and the contributors to these special numbers
